

COFACE COUNTRY & SECTOR RISKS HANDBOOK 2023

MAJOR TRENDS OF THE WORLD ECONOMY

ANALYSIS AND FORECAST FOR 160 COUNTRIES AND 13 SECTORS

coface
FOR TRADE

This handbook is intended for:

- Corporate executives with decisions to make in terms of export, project launches, or investment in high risk countries;
- Managers of risk or international operations in banking, multilateral financial institutions, and insurance or reinsurance companies (acting in a private capacity or on behalf of government);
- Government managers concerned with country risk;
- Consultants and lawyers specialized in international business;
- Researchers, academics, and students interested in country risk.

With contributions from:

- **Coface Economic Research Department:**
Khalid Aït-Yahia, Bernard Aw, Eve Barré, Jean-Christophe Caffet, Marcos Carias, Aroni Chaudhuri, Violette Dollé, Andreea-Alexandra Draghici, Emeric Durand, Bruno De Moura Fernandes, Dominique Fruchter, Gabriel Gervais, Seltem Iygun, Diana Karachanski, Patricia Krause, Simon Lacoume, Erwan Madelénat, Ruben Nizard, Sarah N'Sondé, Laurine Pividal, Grzegorz Siewicz, Christiane von Berg and Youcef Yahiouche.

GLOSSARY

2023, a pivotal year

— **Xavier Durand** —
CEO of Coface

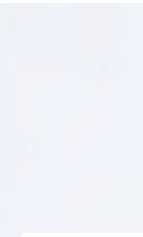

The “soft landing” that we expected for 2022 has been achieved. While global growth will be well below expectations, at around 3%, or 1 percentage point below our initial forecast, the figure remains consistent with the trend growth of the world economy. This is certainly disappointing, given the short-term potential that still existed for closing the output gaps inherited from the pandemic, especially since the rebound in activity in 2021, although unmatched since the first oil shock (+5.9%), was severely hampered by supply chain disruptions. However, there is also some relief as strong headwinds quickly emerged and blew, without interruption, throughout the year.

The war in Ukraine, which broke out on 24 February, was obviously one of the risks we had in mind, although we could not concretely imagine such atrocities returning to European soil. Its consequences are severe and, presumably, long-lasting. However, they have taken longer than initially expected to be felt in terms of global economic growth, despite the acceleration of inflation caused by the rise in commodity prices. The very strong Chinese slowdown, which is to a large extent linked to the zero-COVID policy that the authorities have been sticking to until very recently, is the second reason behind significantly lower global growth compared with our initial forecast. Thus, for the first time in over 30 years (1990), China’s weight in the world economy is likely to have declined last year. Under these conditions, we feel that we should be rather satisfied with 2022, especially as the end of the year should ultimately have avoided the much-feared slide into recession of the advanced economies – owing to climatic anomalies that are worrying, to say the least.

What will 2023 bring? While a few months ago we might have feared a pronounced recession in Europe, as announcements of industrial site closures multiplied and winter approached, it will

probably not happen. Growth is likely to remain sluggish overall (close to zero), as in the United States (below 1%) and in most developed countries. Global growth will be driven almost exclusively by the emerging economies, especially commodity producing countries, which will benefit from both the reduced activism of Western central banks – led by the Federal Reserve – and the recovery of the Chinese economy. After an expected epidemic peak at the turn of spring, activity in China should rebound significantly, buoyed by domestic demand that has been particularly sluggish over the past two years, particularly at the household level, where excess savings seem likely to finance a very strong recovery in consumer spending. Given the growing discontent of the population, the government also seems eager to support activity, as suggested, for instance, by the recent relaxation of control measures or prudential constraints on some sectors (ICT, real estate, etc.).

“Most of last year’s themes will remain at the heart of the agenda, first and foremost the energy crisis and the inflationary hydra.” — Xavier Durand

Needless to say, this rather optimistic view is not risk-free. The transformation of the world is accelerating and the multidimensional crisis we are experiencing is not about to end. Most of last year’s themes will remain at the heart of the agenda, first and foremost the energy crisis and the inflationary hydra. The latter are obviously not solely cyclical and linked to the sanctions against Russia and the impact of the pandemic, but are also, and above all, the legacy of chronic underinvestment in the energy system and, most certainly, the price to be paid for its decarbonisation. While undeniably welcome, the decline in inflation in recent months may therefore be only transitory, and the price surge observed since the reopening of the economies could be the prelude to a new, structurally higher inflation regime. This is even truer as isolationist forces, inherently inflationary, are resurfacing and raising the risk of fragmentation, which is clearly not in the interest of either the collective or any specific country. So how will the monetary and fiscal authorities react, even if we look at the problem only from this angle? Will the fight against inflation, which is at the heart of the mandate of the former, come into open conflict with the objectives of governments? As you can see, the year ahead is fraught with risks on all

fronts – macroeconomic, financial, social, political, etc. – and could see the world economy, depending on the choices that are made, fall into recession or finally get on the (right) track for sustainable, inclusive and virtuous development.

The twenty-seventh edition of this handbook addresses all these questions and attempts to answer them by adopting, as customary, a dual geographical and sectoral approach. I wish everyone an enjoyable read of this document, which Coface publishes every year.

How to use the handbook

1 **AGRI-FOOD**

2 **Sector risk assessments**

Region	Risk Assessment
ASIA-PACIFIC	MEDIUM
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

3 **Risk Analysis Synthesis**

The global agri-food sector has experienced several shocks over the past year – geopolitical, climate and biological. Companies in the sector have had to face the consequences of the war in Ukraine, following Russia's invasion of the country (two major grains exporters), various epizootic diseases and extreme weather events.

The downturn in global activity should confirm this trend. The FAO food price index reached its highest value since September 2011 in May 2022. The increase in energy and fertiliser prices led food prices to soar in spring 2022 and stabilise at high levels in the second semester. We expect agri-food prices to continue to stabilise in the first part of this year.

According to the 6th IPCC report, extreme weather events are now occurring at a rate not seen since the beginning of the 20th century, combined with intense meteorological events (La Niña/El Niño), the intensification of epizootics (avian flu, African swine fever) and the occasional appearance of invasive species. The agricultural segment will remain highly vulnerable to climatic and biological components in 2023.

Finally, the difficulties of the agricultural sector force the European authorities to delay the advancement of "environmental" initiatives, while the slowdown in the production of certain cereals and the soaring production costs are threatening food supplies on the continent and throughout the world.

4 **FAO FOOD PRICE INDEX (100 = 2015)**

5 **GLOBAL CEREALS MARKET (IN MILLION OF TONS)**

COFACE 16 COUNTRY & SECTOR RISKS HANDBOOK 2023

SECTORS

1 Sector name

2 Coface Regional Sector Risk Assessments

This assessment indicates the risk presented by companies in the sector in regions around the world, as considered by Coface in its quarterly sector assessments.

3 Analysis of Strengths/Weaknesses

A summary of the sector's global strengths and weaknesses.

4 Risk Analysis Synthesis

You will find in this section a synthetic analysis of economic and financial development in the markets, as well as main risks in the sector in terms of global trends.

5 Sector Charts

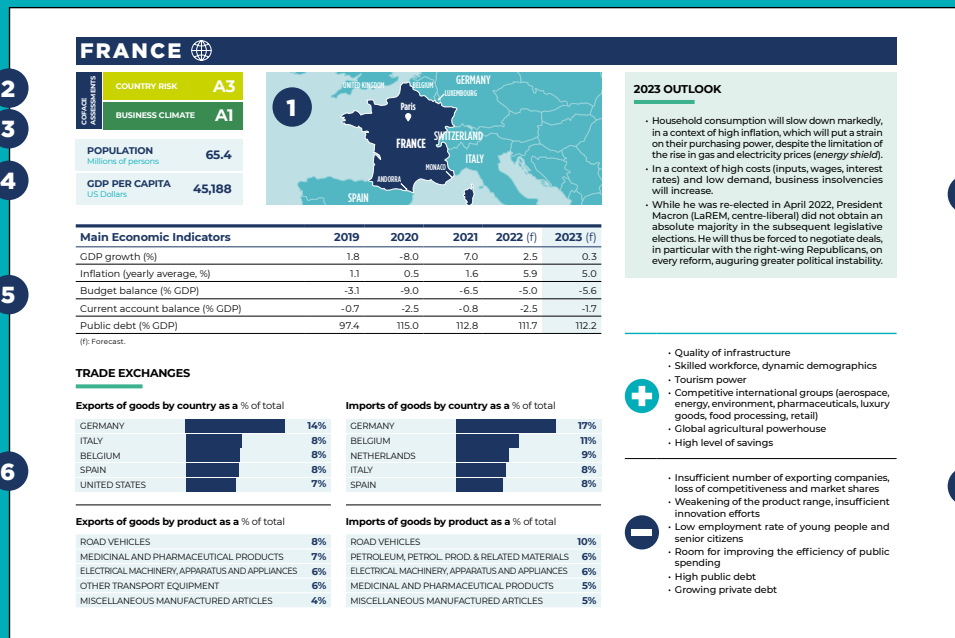

This graph highlights one or more key aspects of developments in the sector.

For more information

(digital version only)

AGRI-FOOD

Click on the sector name to access a more detailed version of the sector profile on Coface website.

COUNTRY PROFILES

1 Country and location

A map allows you to locate the country.

2 Country risk assessment

"Country Risk" indicates the average risk presented by firms in a country as part of their short-term commercial transactions.

3 Business climate assessment

This assessment, which complements the country assessment, measures the quality of the country's business environment: overall reliability of company accounts, legal system, institutional and regulatory environment.

4 Population and GDP

This box shows the population of the country in 2021, the GDP per capita in 2021.

5 Economic indicators

At a glance, see the major macroeconomic aggregates essential to understanding the economic environment in a country as well as forecasted changes.

6 Exports and imports

Distribution of exports (or imports) by country of destination (or origin) and by product. The sources used are IMF and UNCTAD statistics.

7 2023 outlook

In this section, you will find the most important prospective elements for the current year.

8 Analysis of strengths/weaknesses

A summary of the country's strengths and weaknesses.

For more information
(digital version only)

FRANCE

Click on the name of the country to access a more detailed version of the country profile on the Coface website.

TOOLS FOR IDENTIFYING, ASSESSING AND MONITORING THE RISKS BUSINESSES ARE FACING

As a credit insurer, Coface's added value comes from its ability to proactively provide its clients with detailed risk analyses, allowing them to make the right decisions at the right time and prevent credit risks. Its analyses include country and business climate assessments for 160 countries, as well as sector risk, and assessment of companies' default rate. Regular economic publications supplement these assessments developed by Coface*.

Country risk assessment*

The country assessment provides an insight into the average payment incident level presented by companies in a country in connection with their short-term trading transactions. More specifically, this assessment measures how companies' payment behaviour is influenced by the country's economic, financial and political outlook, as well as by the business environment and the emergence of climate risk. It is based on six pillars: macroeconomic analysis, banking system review, political developments, climate risk, but also the assessment of the business environment by Coface entities worldwide, as well as the payment experience recorded by Coface. The country risk assessment covers 160 countries on an 8-step scale: A1, A2, A3, A4, B, C, D, E, in order of increasing risk.

Business climate assessment*

This makes it possible to see whether company accounts are available and reliable, whether the legal system ensures fair and effective protection of creditors, whether the country's institutions provide a favourable framework for B2B transactions and whether the domestic market is easy to access. The assessments are based on data from international organisations, but also, and primarily, on the experience of Coface's entities across the world. This assessment, integrated in the country assessment, covers 160 countries on an 8-step scale: A1, A2, A3, A4, B, C, D, E, in order of decreasing business climate quality.

Sector risk assessment*

Every quarter, Coface reviews the assessments of 13 sectors in 28 countries (representing approximately 88% of global GDP) in 6 major regions of the world. In order to assess these risks, Coface relies on its own methodology, which is based on three pillars and eight criteria, and has been strengthened with more quantitative criteria. The first pillar focuses on data relative to Coface's expertise on corporate payment behaviour worldwide, in the various sectors under consideration. The second pillar concerns forecasts of processed financial data. The last pillar brings together different criteria (evolution

of commodity price forecasts, risks linked to structural changes that may occur in a sector, and country risk assessments, which have an impact on the risk assessment of a given sector in a particular country).

The criteria included in the first two pillars are summarised below.

Coface's expertise regarding payment experience:

- Unpaid ratio level for companies of the same sector in a given country.
- Forecasts on changes in default amounts in a given sector at the global level.
- Sector risk assessment from Coface's underwriting services.

Pillar regarding the use of corporate financial data:

- Daily Sales Outstanding (DSO).
- Analysis of quantiles for forecasts in financial data (net debt, profitability).

Our sector risk assessment model assigns a relative weight to each criterion, in order to arrive at a final risk assessment for the sector in a selected country or region.

We now integrate the impact of "network effects" into our sector methodology. Using Coface's internal data, we create a network (also called a graph) that represents the interactions of sectors/countries between them and thus

allows us to assess the impact of a shock in a given sector/country on the others.

The sector risk assessment is on a 4-step scale: low, medium high, very high, in order of increasing risk (see p. 4).

Assessment of company default rate

The DRA (Debtor Risk Assessment) measures the default rate of companies all over the world. It is calculated on the basis of indicators such as financial soundness, profitability, solvency, as well as the company's environment and management. The assessment scale ranges from 0 (company in default) to 10 (best possible rating). The DRAs are made available to Coface clients on a dedicated website: Cofanet.

Economic publications*

Coface regularly publishes economic publications that deal with country risk, sector risk, and the risk of company insolvency.

* Assessments and studies available on <http://www.coface.com/Economic-Studies-and-Country-Risks>

DEFINITION OF COUNTRY RISK ASSESSMENTS

- A1** Very good macroeconomic and financial outlook. Stable political context. Good quality business climate. This environment positively influences company payment behaviour. **The average probability of default is very low.**
- A2** Good macroeconomic and financial outlook. Generally stable political context. Overall good healthy business climate. **The average probability of default is low.**
- A3** Less favourable and/or volatile macroeconomic and financial outlook. Political context remains stable. Business climate may have some shortcomings. **The average probability of default is satisfactory.**
- A4** Economic and financial outlook could be marked by some weaknesses. Political context could suffer from tension. Business climate may present significant deficiencies. **The average probability of company default is reasonable.**
- B** Uncertain economic and financial outlook. Political context could suffer strong tensions. Business climate may present substantial deficiencies. **The average probability of company default is quite high.**
- C** Very uncertain economic and financial outlook. Political context could be unstable. Business climate has substantial deficiencies. **The average probability of company default is high.**
- D** Highly uncertain economic and financial outlook. Very unstable political context. Very difficult institutional and business climate. **The average probability of company default is very high.**
- E** Extremely uncertain economic and financial outlook. Extremely unstable political context. Extremely difficult institutional and business climate. **The average probability of company default is extremely high.**

DEFINITION OF BUSINESS CLIMATE ASSESSMENTS

- A1** Company reports are (generally) available and reliable. Effective debt collection. High quality institutions. Domestic market is almost perfectly open. **Very satisfactory business climate.**
- A2** Company reports, when available, are reliable. Debt collection works reasonably well. Institutions generally perform well. Domestic market is widely open. **Business climate relatively stable but could be improved.**
- A3** Company reports are not always available, but when they are, are relatively reliable. Debt collection and institutions can present some shortcomings. Domestic market is relatively open. **Safe business climate, but shortcomings can arise.**
- A4** Company reports are not always available or reliable. Debt collection is not always effective and institutions have some inadequacies. Access to domestic market presents some constraints. **Business climate is acceptable but can pose problems.**
- B** Reliability and availability of company reports vary significantly. Debt collection is often difficult. Institutions display weaknesses. Domestic market is not very accessible. **Business climate is unstable and underperforms.**
- C** Company reports are often unavailable and not very reliable. Debt collection is somewhat random. Institutions display numerous weaknesses. Difficult access to domestic market. **Difficult business climate.**
- D** Company reports are often unavailable and unreliable. Debt collection is random. Institutions display significant weaknesses. Very difficult access to domestic market. **Very difficult business climate.**
- E** Company reports are rarely available, and are rarely reliable when they are. The legal system makes debt recovery extremely uncertain. Critical institutional weaknesses. Nearly inaccessible domestic market. **Extremely difficult business climate.**

For further information

The sector assessments are proposed on a scale of four levels: low, medium, high or very high, in ascending order of risk.

— You can find them on page 14

Coface assesses the average credit risk of companies in a given country. To achieve this, Coface uses macroeconomic, financial and political data.

Its originality is to take into account Coface's payment experience recorded for the country's businesses, and its perception of the country's business climate.

INTRODUCTION TO SECTOR RISK ASSESSMENTS NOTES

2023 Coface Sector Risk Assessment

Every quarter, Coface reviews the assessments of 13 sectors in 28 countries (representing approximately 83% of global GDP) in 6 major regions of the world. In order to assess these risks, Coface relies on its own methodology, which is based on three pillars and eight criteria, and has been strengthened with more quantitative criteria. The first pillar focuses on data relative to Coface's expertise on corporate payment behaviour worldwide, in the various sectors under consideration. The second pillar concerns forecasts of processed financial data. The last pillar brings together different criteria (evolution of commodity price forecasts, risks linked to structural changes that may occur in a sector and country risk assessments, which have an impact on the risk assessment of a given sector in a particular country). The criteria included in the first two pillars are summarised below.

Coface's expertise regarding payment experience:

- Unpaid ratio level for companies of the same sector in a given country.
- Forecasts on changes in default amounts in a given sector at the global level.
- Sector risk assessment from Coface's underwriting services.

Pillar regarding the use of corporate financial data:

- Daily Sales Outstanding (DSO).
- Analysis of quantiles of forecasts on financial data (net debt, profitability).

Our sector risk assessment model assigns a relative weight to each criterion, in order to arrive at a final risk assessment for the sector in a selected country or region.

We now integrate the impact of "network effects" into our sector methodology. Using Coface's internal data, we create a network (also called a graph) that represents the interactions of sectors/countries between them and thus allows us to assess the impact of a shock in a given sector/country on the others.

REGIONAL SECTOR RISK ASSESSMENT

This assessment scales on four steps, in order of increasing risk: **Low, Medium, High or Very High.**

AGRI-FOOD 

Sector risk assessments

ASIA-PACIFIC	MEDIUM
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

- The sector is relatively resilient to economic shocks, as food needs are not very compressible
- Comfortable stock levels for the opening of the 2022/23 season, particularly for basic cereals (wheat, etc.)

- Sector vulnerable to inflationary tensions on energy and input prices
- Sector highly impacted by protectionist tensions
- Sector heavily exposed to climatic and biological hazards, aggravated by the increased frequency of extreme events (drought, La Niña, etc.)
- Volatility of agricultural commodity prices

RISK ANALYSIS SYNTHESIS

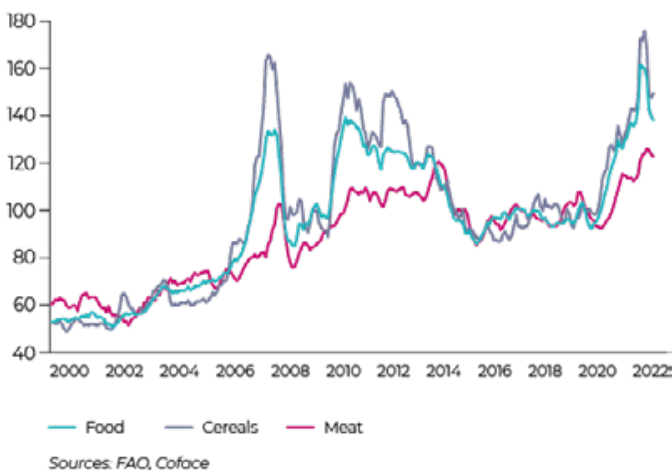

The global agri-food sector has experienced several shocks over the past year – geopolitical, climate and biological. Companies in the sector have had to face the consequences of the war in Ukraine, following Russia’s invasion of the country (two major grains exporters), various epizootic diseases and extreme weather events.

The downturn in global activity should confirm this trend. The FAO food price index reached its highest value since September 2011 in May 2022. The increase in energy and fertiliser prices led food prices to soar in spring 2022 and stabilise at high levels in the second semester. We expect agrifood prices to continue to stabilize in the first part of this year.

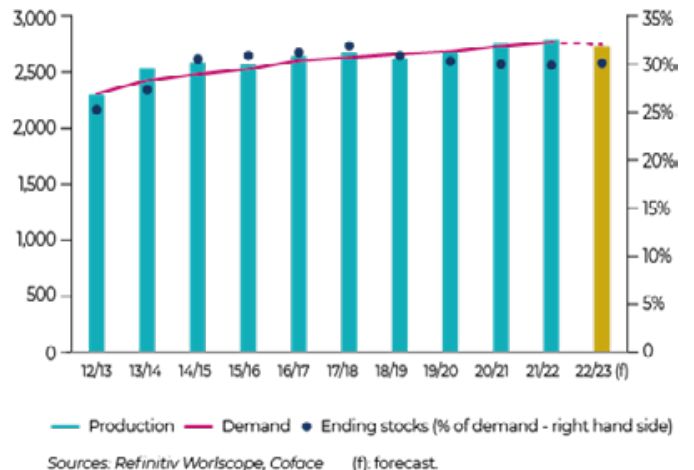

According to the 6th IPCC report, extreme weather events are now occurring at a rate not seen since the beginning of the 20th century, combined with intense meteorological events (La Niña/El Niño), the intensification of epizootics (avian flu, African swine fever) and the occasional appearance of invasive species. The agricultural segment will remain highly vulnerable to climatic and biological components in 2023.

Finally, the difficulties of the agricultural sector force the European authorities to delay the advancement of “environmental” initiatives, while the slowdown in the production of certain cereals and the soaring production costs are threatening food supplies on the continent and throughout the world.

MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Key-sector for the neutral-carbon mobility transition
- Important investments in R&D
- Global supply chain is well-integrated

- Procyclical sector vulnerable to global economic outlook (interest rates, households' confidence, etc.)
- Highly impacted by trade tensions regarding supply chain (semi-conductors, chips, etc.)
- Increasingly constrained by environmental rules regarding greenhouse gas emissions
- Growing world competition due to entrance of new stakeholders, more specifically in EVs

RISK ANALYSIS SYNTHESIS

The global outlook for 2023 for the automotive sector remains negative. 2022 has confirmed the structural difficulties that the automotive sector has been facing for several years, to which were added a sluggish economic situation, monetary tightening from central banks and the higher cost of energy. This macroeconomic context have had a major impact on the sector. This is expected to continue into 2023, constraining manufacturing production (equipment manufacturers, carmakers) as well as household consumption and distribution networks.

Beyond the logistical disruptions, the sector is facing major structural challenges, the most important of which is the transition to low-carbon transport. The entire automotive industry is a major vector of innovation. In Europe, for example, it accounts for 32% (2021) of R&D spending, compared with 17% for pharmaceuticals, even if the trend has been downward since 2017. The decarbonisation of the automotive sector takes various forms: regulatory/industrial in Europe, where the production of combustion engine vehicles will be banned from 2035; technological in Asia, where China has a near-hegemony over the lithium industry (lithium is essential for the manufacture of lithium-ion batteries); and geopolitical in the United States, where the Inflation Reduction Act restricts subsidies for the purchase of electric vehicles, to those produced on North American soil.

The sector's energy transition has brought to light the global competition between manufacturers, but also the power relationships in place in the vertical value chains, particularly between manufacturers and distribution networks. Indeed, the Paris Motor Show in October 2022 gave us an idea of the emergence of Chinese carmakers and their efforts in the electric vehicle segment. Secondly, automakers are constantly increasing the pressure on the upstream and downstream parts of the value chain. Their profitability is being improved in part by reducing subcontractors' margins.

MIDDLE EAST & TURKEY	MEDIUM
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

- Some specialty chemical companies benefit from innovative products to combat environmental risks
- Specialty chemical companies are less vulnerable to changes in the business cycle

- Petrochemicals are highly dependent on the economic situation
- Stricter regulatory environment forces producers to review their business models
- Significant legal risks resulting from the effects of certain chemicals on human health
- High commodity prices reduce margins
- Risk of overcapacity in some petrochemical segments

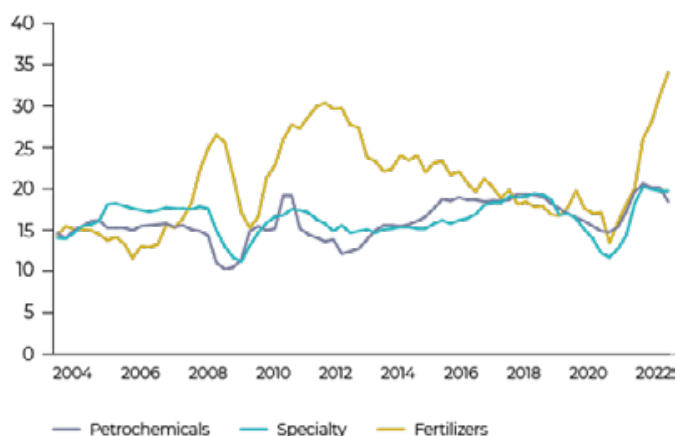

RISK ANALYSIS SYNTHESIS

When it comes to the chemical sector, we focus our attention on three segments: petrochemicals, specialty chemicals and fertilizers. Petrochemical activities are more sensitive to changes in economic conditions, while the specialty chemical industry is less vulnerable to changes in economic cycles. Activities related to the fertilizer industry, on the other hand, are more subject to the vagaries of the agri-food sector.

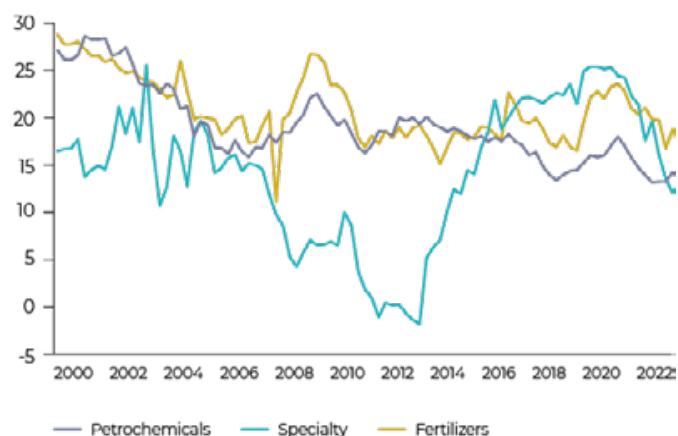

In 2023, Coface forecasts that petrochemicals will continue to be affected by the war between Russia and Ukraine. A “scissor effect” is affecting industrial margins: on the one hand with a drop in demand due to the slowdown in the global economy and in the construction and automotive sectors at the global level; on the other hand, with high fossil fuel prices. There are significant risks to the sector in the short-term, primarily the effects of high energy costs. Medium-term uncertainties are increasing as well (gloomy global economic activity with a risk of recession, potential relocations closer to regions where energy is less expensive), even though production capacity will continue to grow in the coming years, particularly in Asia, the Middle East and North America.

Finally, the proliferation of public policies aimed at carbon neutrality (Net Zero) around the world will encourage companies in the global chemicals sector to reduce their environmental footprint in order to gain better access to finance, as well as to avoid the increasing risks of litigation, due to growing pressure from environmental activists. Health risks such as endocrine disruption and accidental pollution affect the public’s perception of the social contribution of companies.

PROFITABILITY EVOLUTION OF SEVERAL CHEMICAL SEGMENTS (EBITDA/SALES, IN %)

- Further development of urbanization in emerging economies
- Energy transition offers business opportunities, investment and innovation for companies in the sector
- Important public investments plans to push for infrastructure development and renovation

- Level of corporates' indebtedness remains high, particularly in China
- High household debt at the global level
- Vulnerable to supply chain disruptions and labour shortages
- Procyclical sector
- High interest rates environment

RISK ANALYSIS SYNTHESIS

Companies operating in the residential segment will continue to struggle with high interest rates and inputs prices. Interest rate hikes will keep hampering on housing sales, notably in Europe and in North America. Moreover, housing affordability is weakened by prices levels, making upfront payments out of reach for households. In China, the real estate sector is highly leveraged and faces a slump in housing demand. Authorities are likely to support the property market, notably through fiscal measures and liquidity access to distressed developers.

Construction materials makers will experience lower volumes in 2023 due to the residential segment's difficulties. Furthermore, we expect them to continue to pass on higher input prices to their clients, as they did during 2022.

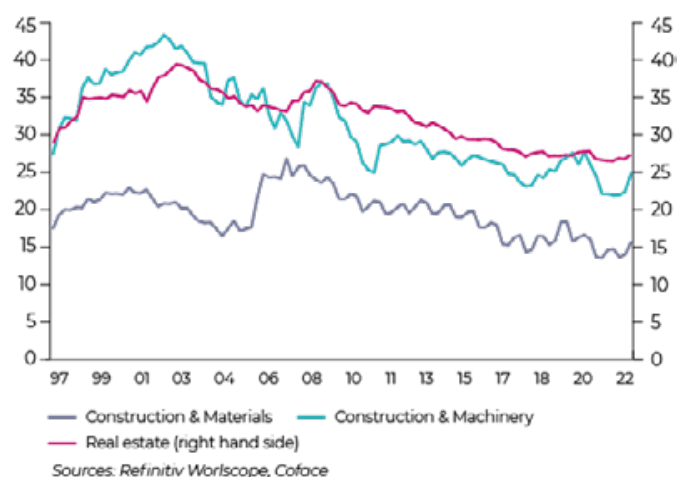

Several governments' infrastructures plans were passed, in advanced economies last year, to support companies operating in the nonresidential segments. The US Inflation Reduction Act passed into law in 2022 will help to spur investment into repurposing and replacing energy infrastructures for instance. It follows the Bipartisan Infrastructure Law (Infrastructure Investment and Jobs Act) passed in 2021, but focuses more on fighting against climate change. In Europe, the Renovation Wave of the European Green Deal will support construction materials makers and their specialized retailers to somewhat sustain the loss of volumes from the residential segment. The Renovation Wave is notably focused on deep building renovation, to help decarbonize buildings and thus reduce energy consumption.

From the ESG standpoint, the main issue facing by companies in the construction sector is to manage the decarbonisation of their activities. Moreover, several other issues have to be addressed such as water scarcity, for materials makers, and the necessity to reduce GHG emissions, as this segment is particularly energy intensive.

PROFITABILITY FOR CONSTRUCTION SECTOR'S SEGMENTS (EBITDA/SALES, %)

NET DEBT RATIO FOR CONSTRUCTION SECTOR'S SEGMENTS (NET DET/ASSET, %)

ENERGY 

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

- Oil companies' ongoing efforts to lower their breakeven point and cash-in on high oil prices
- Diversification of revenue streams of large oil and gas companies
- Important developments of renewables, especially solar, to fight climate change's effects

- High levels of debt, especially for companies exploiting non-conventional oils
- High volatility of crude oil prices
- Strong pressure from environmental activists to reduce investment in fossil fuels

RISK ANALYSIS SYNTHESIS

Coface expects 2023 to remain a good year for oil and gas producing companies, thanks to continued high prices. Coface forecasts Brent crude oil prices to average USD 90 per barrel this year, down from around USD 100 per barrel in 2022. The high oil and gas prices environment last year enabled those companies to post very positive financial results. On the back of an unprecedented energy crisis, oil and gas companies had indeed established themselves as prominent actors for energy security, not only in Europe, but also in several other regions. The gradual lessening of the zero-COVID policy in China and the potential economic recovery in the second half of 2023 is likely to sustain fossil fuel prices and thus the profitability of the oil and gas sector, particularly the upstream segment.

Moreover, renewables are suffering from some continued supply chain issues and lower demand, notably in the offshore segment. We see the US Inflation Reduction Act (IRA) and the RePowerEU plan as boons for renewables equipment makers in 2023, depending on authorities' pledges being made tangible with more investment and by facilitating authorizations for solar and wind installations, notably in Europe.

The fight against the effects of climate change will undoubtedly continue to impact the energy sector. A key issue for the sector in the years to come will be the articulation between public authorities' willingness to accelerate the transformation of the economy towards 'net zero' with the need to ensure energy security, which for the time being requires the use of fossil fuels.

- The globalisation of internet access and market penetration opportunities are accelerating
- Exponential growth of connected goods
- Important opportunities expected to meet cybersecurity needs
- Strong innovation, with AI having a growing impact on all sectors and future 5G technology

- Saturation of some hardware in large markets (tablets, smartphones, PCs)
- Tougher regulatory environment in the future for ICT giants
- Trade tensions between China and the United States focusing on technological issues
- Limited resources of critical inputs

RISK ANALYSIS SYNTHESIS

The boundaries are increasingly blurred between the product and service ranges offered by ICT companies and the firms' traditional business activities.

Digitalisation, i.e. the extension of the gradual adoption of ICT in more sectors and their production processes, currently goes through cloud computing (powered by data centres, Internet towers and fibre). This increases business continuity and automation. In 2023, the diversification in the cloud for industrial economies will continue to constitute growth driver to certain players, while we expect media and telecom revenues to continue to stagnate or even decline. The continued global economic slowdown and the risk of recession could lead to additional investment cuts.

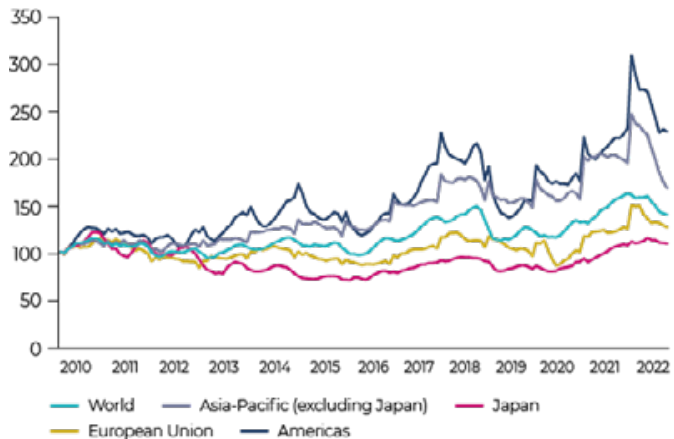

The sector remains resilient overall, thanks to the continued digitalization of the global economy, the expansion of remote working, the faster growth in the use of the cloud and cyber-security needs of organisations. Nevertheless, many challenges remain. On the one hand, international trade tensions are mounting, notably between China and the United States and around technological issues. On the other hand, normative developments in terms of data protection, taxation, freedom of expression and CO₂ emissions in many countries are continuing, in order to make them more restrictive toward the "tech giants" and the entire ecosystem.

MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Key sector in the energy transition and low carbon industrial strategies
- Strategic and high added-value sector (technological, geopolitical, etc.)
- High unexploited mining potential

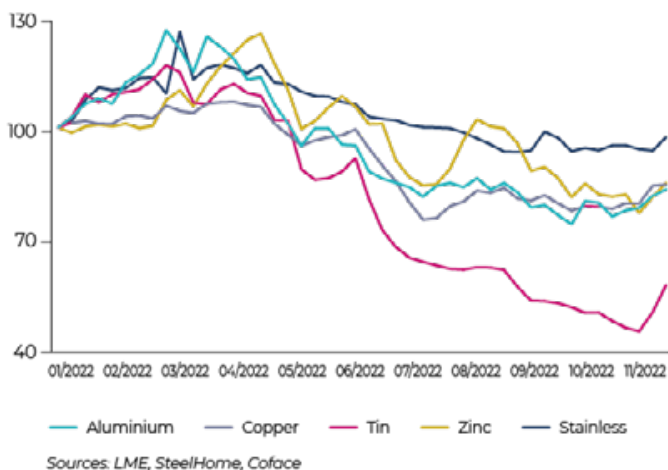

- Procyclical sector vulnerable to macroeconomic trends
- Sector vulnerable to energy and electricity price inflation
- Long industrial and investment cycles detached from cyclical shocks
- Sector highly targeted by on-going strengthening of ESG (environmental, social and governance) norms

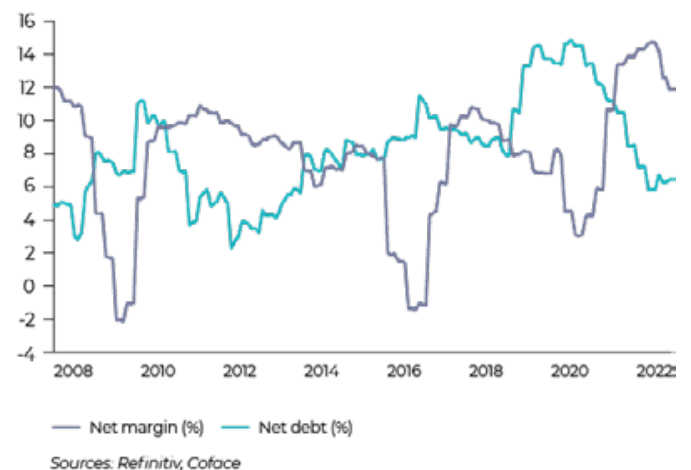

RISK ANALYSIS SYNTHESIS

Coface expects high volatility in commodities prices to continue in 2023, and particularly in metals. We expect the prices of the base metals (steel, copper, etc.) to keep falling, as the global economic context faces difficulties. After the inflationary surge in metals (2021/22), accentuated in the first half of 2022 by the war in Ukraine, most metals prices have fallen from their peak of the year. This is due to two main factors. On the one hand, the financial markets anticipated a slowdown in global GDP. On the other hand, there have been direct effects of rising interest rates on customer-sectors, such as the construction sector. The deflating Chinese real estate bubble and the downturn of its economy (4% expected in 2023 compared with 8.1% in 2021) crystalizes those concerns. Consequently, the prices standardization – relatively close to historical trends – in a global inflationary context (more specifically energy) strongly affects metals producers (e.g. aluminum, steel, etc.) and threatens their profitability. Finally, the increasing environmental considerations, including compliance with international agreements on the reduction of greenhouse gases, is also pushing some minerals/metals producing countries to stabilize or even lower their medium-term production targets.

- Sustainable and recyclable (packaging)
- Increasing use of packaging paper due to the rise of e-commerce and increase of environmental rules

- Gradual replacement of graphic paper by digital media in view of the increasing use of digital technologies
- Packaging paper is highly vulnerable to global trade evolution
- Environmental issues (deforestation) and energy intensive

RISK ANALYSIS SYNTHESIS

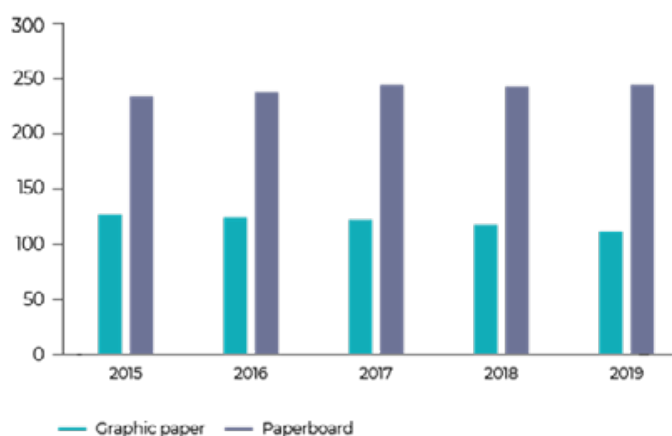

As part of its sector risk assessment methodology, Coface includes two segments in its analysis of the paper sector: graphic paper and packaging paper, whose trends are increasingly diverging with the growth of digitalisation and e-commerce (packaging).

Although both segments have maintained their general trend in 2022 (compared with 2021), the effects of soaring energy prices and the general inflationary context have not spared them. Indeed, paper production, like the entire upstream forestry sector, is extremely energy-intensive. The increase in energy prices (oil & gas, electricity) has largely affected the production costs of the various paper products, whether graphic or packaging.

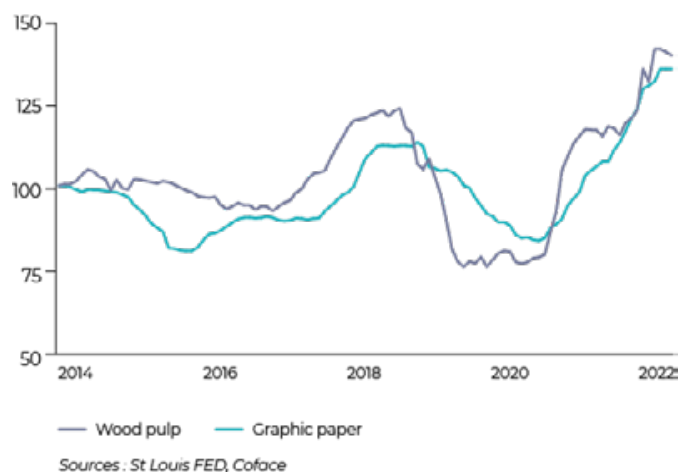

Prior to the pandemic, the use of graphic paper had begun to decline as the global economy became increasingly digital. Periods of lockdown, school closures, etc., exacerbated this phenomenon, which is now continuing. 2023 is expected to follow the same pattern of continued decline in graphic paper.

In contrast, packaging paper is benefiting more from the strong development of e-commerce (although vulnerable to economic downturns) and therefore increased delivery activity worldwide. It also benefits from a sound and stable demand for paper products for personal hygiene (surgical masks, disinfectant wipes, disposable paper towels and other related hygiene products) and growing consumers' preferences for environmental-friendly packaging. Nevertheless, the weak global economic growth (1.9% in 2023, Coface) and the upcoming decline in consumption should weigh on the packaging paper segment in 2023.

WORLD PRODUCTION OF GRAPHIC PAPER AND PAPERBOARD (IN MILLION OF TONS)

PRODUCER PRICE INDEX (100 = 2014)

PHARMACEUTICALS 

Sector risk assessments

ASIA-PACIFIC	LOW
CENTRAL & EASTERN EUROPE	LOW

NORTH AMERICA	MEDIUM
WESTERN EUROPE	LOW

- 
 - High profitability of pharmaceutical and biopharmaceutical companies
 - Strong ability to innovate
 - Development of public health insurance schemes in emerging countries
 - Strong government support via funding
 - High overall barriers to entry favouring incumbents

- 
 - Increasing competition among generics producers
 - Greater access to market for biosimilars
 - Pressure from payers to lower drug prices
 - Regulators paying closer attention to the health impact efficiency of new therapies

RISK ANALYSIS SYNTHESIS

The pharmaceutical sector overall remains the most resilient sector, compared with other sectors for which Coface produces sector risk assessments, despite the challenges ahead.

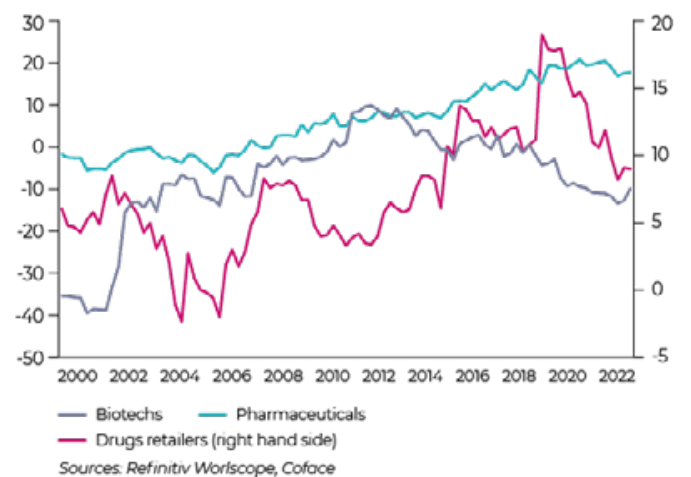

The sector is highly leveraged after the buying spree needed to replenish a somewhat depleted drug pipeline. Sales have recovered to pre-COVID-19 levels, as have clinical trials. We expect companies in the sector to continue to be impacted by high energy prices and inflationary tensions this year.

Furthermore, several structural challenges for companies in the sector, that Coface analysed prior to the COVID-19 crisis, persist. They include official pressure to lower drug prices notably for expensive therapies, criticisms of governments on the perceived lack of transparency in price setting, distributor segments' difficulties, litigations related to drugs' side effects or downplaying addiction to certain substances, a "patent cliff" that will lead to loss of exclusivity by 2030, etc.

PROFITABILITY OF SEVERAL PHARMACEUTICAL SEGMENTS (EBITDA/SALES, IN %)

RETAIL 

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Growth of the Chinese middle class in the long-term
- Strong urbanisation in Asia and Africa, which will drive up demand

- Strong competition between players in the sector
- Procyclical sector, therefore highly impacted by the economic slowdown
- Strong impact of high energy costs
- Fragility of physical sales outlets in the face of the development of online commerce

RISK ANALYSIS SYNTHESIS

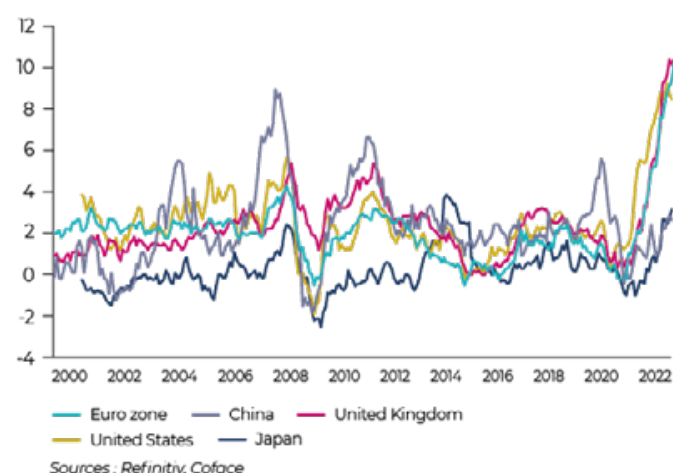

The retail sector's difficulties are expected to continue in 2023. After a strong performance in 2021, the retail sector experienced difficulties in a majority of regions in 2022. This is due to inflationary pressures, which were already latent in early 2022 due to high maritime freight rates in particular. Inflation then reached record levels in many countries (especially in Europe) following the war in Ukraine and the economic sanctions imposed on Russia. The interest rates hikes by leading central banks worldwide to counter inflation have increased the cost of credit and therefore have penalized household consumption.

Furthermore, the global economic slowdown linked to the energy crisis has led to a slowdown in household incomes and a rise in unemployment. The impact on retail (including e-commerce) will be all the more limited as public aid to households will be substantial. However, the implementation of these measures would cause a sharp increase in the public deficit, so it is a matter of trade-off between household purchasing power and public deficit.

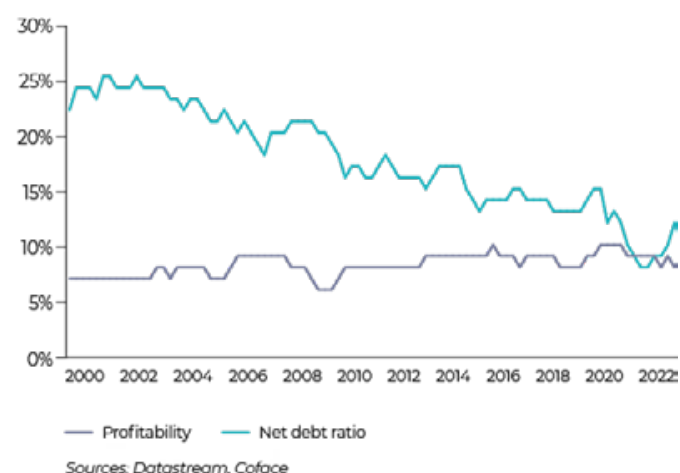

Despite the progress made in terms of vaccination campaigns, the COVID-19 pandemic remains a major risk, particularly in China, and is adding pressure on the sector.

E-commerce, which has been booming in recent years and has benefited greatly from the containment measures during the (peak of global) health crisis, has not been spared from the disruption of supply chains. However, as supply chain disruptions subside, the e-commerce companies' segment are likely to put pressure on traditional players, who are struggling to adapt to this new mode of consumption. To meet these challenges, they need to rethink their strategies, including increasing the use of new digital tools and more efficient logistics systems.

INFLATION OF SELECTED COUNTRIES (%)

PROFITABILITY AND NET DEBT RATIO OF RETAIL SECTOR COMPANIES

TEXTILE-CLOTHING 

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	VERY HIGH
LATIN AMERICA	VERY HIGH
MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	VERY HIGH
WESTERN EUROPE	VERY HIGH

- Growing middle class in emerging countries
- Development of fast fashion

- Polluting sector with volumes threatened by the circular economy and targeted by on-going ESG norms strengthening
- Procyclical sector, impacted by falling global demand and inflationary pressures
- Energy intensive means of production

RISK ANALYSIS SYNTHESIS

The textile-clothing sector is strongly affected by the economic slowdown and inflationary pressures, having already suffered from the consequences of the COVID-19 crisis. Coface expects the economic slowdown in the advanced economies in 2022-23 to have a negative knock-on effect on clothing sales. This is due to households' eroded purchasing power shifting to mandatory items such as food and energy. In addition, this energy-intensive sector is suffering from cost pressures related to the war in Ukraine.

This shock does not affect all the players in the sector symmetrically. Traditional Western retailers are retreating sharply in the wake of the crises and competition from fast fashion and second-hand clothing platforms. Asia, with its large manufacturing base and expanding consumer base, is concentrating growth in the luxury and online segments.

Faced with rapid changes in the competitive and productive environment, some companies may face short-term difficulties in both industry and commerce. Driven down by lower downstream demand, cotton prices have fallen sharply in 2022; wool and polyester are following similar trends. Thus, many manufacturers are having to manage depreciated inventories with falling prices and the downturn in apparel. China is seeing a decline in the share of textiles in its industry, exacerbated by relocations to take advantage of more competitive labour, in Bangladesh for example.

While stringent environmental standards are being prepared in many countries, fast fashion is at odds with ESG standards. Consumption patterns remain largely price-driven, both for new and second-hand goods.

TRANSPORT

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	VERY HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TURKEY	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	VERY HIGH

- Technical progress contributing to cost reduction
- Transport is necessary for trade and individual's mobility

- Sector highly dependent on oil price fluctuations
- Sector hardly hit by environmental concerns

RISK ANALYSIS SYNTHESIS

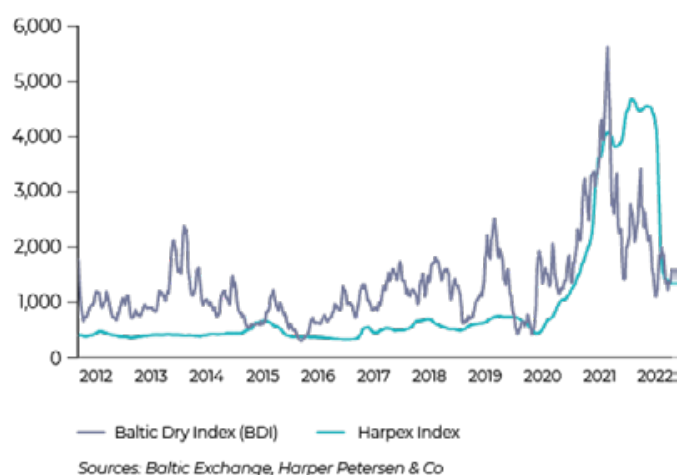

After performing very well in 2021 and 2022 (because of high freight rates and the rebound in demand for goods after the lockdowns), shipping companies are expected to see their revenues decline in 2023. High energy costs and the slowdown in economic activity, will reduce demand for goods and therefore demand for freight. This will affect all types of transport (road, rail, air and sea). In addition, high energy costs will have an effect on the margins of companies in the sector: by increasing production costs and, in the longer term, the prices of new vehicles, as manufacturers are forced to pass on part of the increase in production costs to prices.

In line with Coface's forecasts, passenger air traffic has recovered in most regions following the lifting of mobility restrictions, but has not reached pre-pandemic levels. The number of commercial flights in 2022 increased but remained 10% below 2019 levels. Aircraft manufacturers Airbus and Boeing have benefited from a sharp rebound in orders during the recovery. However, the global economic slowdown and high energy costs are expected to reduce the number of orders in 2023.

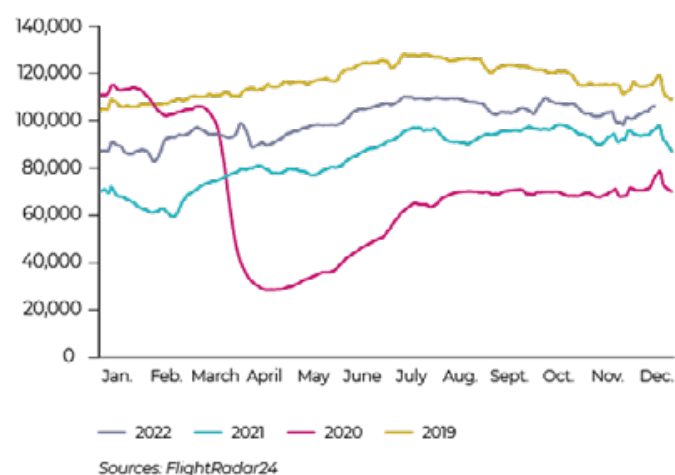

In the longer term, the sector is expected to continue to benefit from the need for mobility, the emergence of the Indian and Chinese middle classes and the reduction in costs due to technical advances, particularly in the air and maritime segments.

Environmental concerns and measures to combat greenhouse gas emissions or pollutants could penalise the sector responsible for 23% of CO₂ emissions. However, these concerns could be a boon for vehicle manufacturers as transport companies are forced to renew their fleets.

SEA FREIGHT RATES

DAILY NUMBER OF COMMERCIAL FLIGHTS (7-DAYS ROLLING AVERAGE)

WOOD 

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TURKEY	VERY HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Commodity valued within the framework of the development of “sustainable” construction, aiming to limit environmental risks

- Dependent on the construction and paper sectors, which are in difficulty
- Procyclical sector, therefore, highly impacted by the economic downturn
- Highly impacted by high energy costs
- Important costs due to sector players’ efforts to adapt to stricter regulations on wood exploitation to preserve forests

RISK ANALYSIS SYNTHESIS

We expect activity in the wood sector to deteriorate in 2023. First, the decline in construction activity, linked to a drop in global economic growth (especially in the European Union) and high interest rates to fight inflation, will mechanically lead to a drop in demand for wood, since construction is the main customer sector for wood. Second, as the wood sector is energy intensive, it will be particularly affected by high energy costs. Companies will therefore have to choose between absorbing the increase in production costs and passing on all or part of this increase in prices. The latter option presents a risk as it would create additional upward pressure on house building prices while households are already facing rising interest rates. The sector will only benefit from higher energy prices to a very limited extent. While wood as a source of heat or electricity is becoming more competitive than other energy sources, the possibility of substituting one for the other in the short-term is low, as this requires the necessary equipment. The war in Ukraine and the sanctions against Russia (important global wood producer) by many countries are affecting the supply of wood and are forcing companies in the sanctioned areas to look for alternative sources of wood, thus pressuring prices.

In the longer term, the sector could benefit from ESG standards strengthening. Wood is, to some extent, renewable and its combustion emits very little CO₂. However, the wood sector is particularly affected by global warming and natural disasters, which are likely to become more frequent and violent.

2023 OUTLOOK

- As the engine of growth, household consumption is expected to only partially overcome the inflationary shock.
- Thanks to external financing, public investment is expected to continue in 2023, especially to improve the continuity of road and electricity networks.
- Exports increased in tourism and textiles, but did not compensate for higher import prices.
- Relying on a solid majority, the socialist Rama consolidates finances by increasing revenues, so as not to cut already low social spending.
- The European Union opened accession negotiations with Albania in July 2022.

2023 OUTLOOK

- Economic growth will slow due to lower oil production and a slight decline in the price of oil, partly offset by the resilience of gas, consumption and investment (public and private).
- Fiscal policy will remain accommodative, with social and military spending rising sharply, but at the cost of a widening deficit.
- The exceptional current account surplus of 2022 will fall sharply due to lower oil revenues and the lifting of the ban on car imports.
- While the social risk will be contained by generous subsidies, relations with Morocco will remain strained due to their opposition over Western Sahara.

2023 OUTLOOK

- After peaking in 2022, growth will slow in 2023 as oil production is expected to decline due to field depletion, while the average oil price declines slightly.
- Monetary policy is expected to continue to ease as inflation falls and the kwanza strengthens, supporting consumption and investment.
- The public and external surpluses will diminish with the drop in oil revenues, but they will be sufficient to reduce the external debt, particularly vis-à-vis China, while maintaining social assistance.
- The MPLA, which has been in power since independence, and President João Lourenço were narrowly re-elected in 2022.

2023 OUTLOOK

- The economy is expected to enter into recession in 2023, dragged down by skyrocketing inflation, gradual fiscal consolidation and amid rising import controls (prompting to manufacturing input shortages).
- Dry weather conditions will curb the 2022/2023 crop yields, which may not be offset by the still historically high agricultural commodity prices (affecting exports and putting further pressure on the limited foreign currency reserves).
- General elections will take place in October 2023, which could heighten government's caution and jeopardise its strategy to narrow the fiscal deficit.

2023 OUTLOOK

- Less benefiting from the arrival of Russian companies, nationals, and the associated capital, which caused an upward GDP surprise in 2022, the country's growth is expected to moderate in 2023, with the slowdown of economic partners and continued inflation (which will weigh on household consumption).
- The current account balance will remain negative, driven by pricy imported energy, but also a decline in external demand, despite high prices for exported ores.
- Despite higher defence spending, the public deficit will remain modest and the public debt/GDP ratio below the target of 60%.

- Geographic proximity to dynamic Asian economies, member of RCEP
- Rich endowment in mineral resources
- Moderate levels of public debt
- High tourism potential

- Exposed to commodity price volatility (specifically iron ore, coal and LNG)
- Economy remains dependent on Chinese demand
- Substantial household debt (183% of gross disposable income)
- Shortage of infrastructure due to the country's vast territory
- Vulnerable to climate change (bushfires and droughts)
- Disparity between federated states

AUSTRIA 

COFACE ASSESSMENTS	COUNTRY RISK	A3
	BUSINESS CLIMATE	A1
POPULATION Millions of persons		8.9
GDP PER CAPITA US Dollars		53,332

2023 OUTLOOK

- Austria's economy should grow only slightly in 2023, as inflation remains relatively high and weighs on consumption, although public support should somewhat stabilise real income.
- The current account surplus should remain stable, as an expected increase in tourism (thanks to catch-up effects from the pandemic in ski-tourism) should outweigh the recent trade in goods deficit.
- The current coalition out of the conservative-right wing ÖVP and the Greens will remain until 2024, because its popularity has fallen so much that they would have no chance to retain power in the event of an early election in 2023.

- Well-established tourism sector, benefiting from its proximity to the North American market
- International banking and financial services centre
- Institutional stability

- Dependence on tourism (50% of GDP) and on the United States (tourism, trade, peg to the USD)
- High exposure to natural disasters and the effects of climate change
- Insularity: dependence on food and energy imports, maintaining a large current account deficit
- High public debt
- High crime rate, especially associated with drug trafficking
- Considered a tax haven, subject to increased scrutiny: added to the EU list in October 2022

2023 OUTLOOK

- Growth will slow on the back of tighter monetary policy and lower oil exports. Investments in new refining capacities and tourism revenues will be supportive.
- After improving significantly in 2022, the budget deficit will increase due to falling oil revenues.
- Lower exports and higher foreign workers' remittances will drag down the current account surplus, despite higher tourism revenues.
- No political tension expected in the absence of an organised opposition. However, existing tensions between the Shia majority and Sunni elite will continue.

- Solid banking sector, developed financial hub
- More diversified economy compared with its GCC neighbours
- Large aluminium exports, making Bahrain the eighth largest exporter in the world
- Easy policy making process, secured one again after the elections in November 2022, no challenge to the authorities

- High fiscal and external breakeven oil prices
- High level of public debt
- Fiscal and export dependence on oil and aluminum sales, exposure to volatility in commodity prices

2023 OUTLOOK

- Growth outlook constrained by lower consumption due to weaker household income. Power shortages, rising input costs will limit industrial output. Public spending slackens on government austerity measures to create fiscal space.
- Garment exports (>80% total exports) to slow on growth weakness in major economies. High prices and shortages of fertilisers also weigh on agriculture output.
- Inflation to accelerate. High commodity prices, local fuel price hikes, proposed power tariff rate increases are all factors for price pressures.

2023 OUTLOOK

- The continued rebound in tourism should support activity. The slowdown in the United Kingdom, the United States and Canada could nevertheless weigh on prospects for the sector. Fiscal consolidation efforts will slow down construction.
- SOE and pension reforms will contribute to a primary surplus from 2022/23. Public debt would resume the downward trajectory interrupted by COVID-19 and natural disasters.
- Despite rising tourism revenues, high import prices will keep the current account deficit high.
- Prime Minister Mia Mottley's mandate was strengthened by her party's landslide victory in the January 2022 elections.

2023 OUTLOOK

- The recession is expected to continue in 2023, driven by weaker household consumption, reduced production in key sectors (industry and agriculture) and lower investment (notably from Russia).
- EU sanctions associated with the war in Ukraine regarding export, import, financing, and transport will weigh on the exchanges, despite initiated shift in trade and despite their circumvention.
- Still high inflation and expatriate remittances hit by the Russian recession will hamper household consumption.
- The fiscal deficit will remain negative, due to the decrease in revenues, and to expenses associated with support measures.

	BUSINESS CLIMATE	A1

POPULATION Millions of persons	11.6
GDP PER CAPITA US Dollars	51,849

2023 OUTLOOK

- Belgium is set for a stagnation in 2023. While wages will increase sharply due to their indexation to the inflation rate, so will consumer prices. This will keep the purchasing power of households under pressure.
- Public deficit will increase due to higher wages for public employees and social benefits, as well as other state support measures to alleviate the energy bill. Revenues will be constrained by recession.
- Despite very heterogeneous political positions, the "Vivaldi-coalition" out of seven parties will keep on, due to the fear of extremist parties coming to power instead.

- Optimal trade-strategic location between the United Kingdom, Germany and France
- Ports of Antwerp (second-largest in Europe) and Zeebrugge
- Presence of European institutions, international organisations and global groups
- Well-trained workforce thanks to vocational education, multilingualism

- Political and financial tensions between Flanders and Wallonia
- Complex institutional structure and multiple administrative levels
- Very dependent on the Western European economy: exports of goods and services = 86% of GDP, of which almost 60% go to the rest of the EU
- High structural unemployment
- Heavy public debt

BELIZE

COFACE ASSESSMENTS	COUNTRY RISK	D
	BUSINESS CLIMATE	C

POPULATION Millions of persons	0.4
GDP PER CAPITA US Dollars	5,638

2023 OUTLOOK

- Growth will be supported by the rebound in tourism and the development of tourism infrastructure. However, it will be held back by the slowdown in the United States, the main destination for exports and a source of tourists and investment.
- Although the introduction of a minimum wage (5 BZD per hour) will increase the government's wage bill, the deficit is expected to remain small. The restructuring of part of the debt has reduced the cost of servicing, which remains high.
- The current account deficit is expected to remain large despite increased tourism receipts. FDI, grants and multilateral loans would finance it, allowing the peg to the USD to be maintained (1 USD = 2 BZD).

2023 OUTLOOK

- After the cotton boom, the economy will benefit in 2023 from the opening of transit infrastructures, such as the Agadem (Niger)-Port Sémé oil pipeline and the "cotton road" in the North.
- Food self-sufficiency and subsidies, which can be sustained thanks to sound finances, mitigate the effects of inflation on households.
- The World Bank supports projects to develop tourism and processing industries.
- There is a growing risk in the North due to jihadist incursions.
- Re-elected in 2021, President Talon has no strong opposition, but territorial and social inequalities weaken the social context.

2023 OUTLOOK

- In 2023, the economy should still expand nicely, lifted by household consumption amid an improving job market and moderate inflation.
- Exports growth to lose steam, owing to the cooling down of activity in its main trade partners (Brazil and Argentina) and to some softening of commodity prices.
- Still substantial fuel subsidies and rising borrowing costs will limit stronger fiscal consolidation.
- On the external front, declining international reserves pose a risk.

2023 OUTLOOK

- Inflation should remain high, which will hamper household consumption.
- The decline in real household income, as well as potentially lower external demand will have an impact on growth, which will moderate in 2023.
- The current account balance could be impacted both by a drop in energy exports and manufactured goods, but also by a moderation tourism, following a very bullish year in 2022.
- After additional expenditure to support households and in the context of general elections in 2022, the budget balance will improve in 2023.
- The results of the elections could have a negative impact on the political stability of the country.

2023 OUTLOOK

- Economic recovery will remain on track in 2023, driven largely by improved terms of trade and increased diamond production, as well as a more dynamic tourism sector.
- The public and external accounts will strengthen, notably thanks to a fiscal consolidation plan (control of the wage bill, better targeting of social spending, etc.), super-profits from the mining industry, and increased exports.
- Despite peaceful and transparent elections in 2019, social stability could be at risk, against a backdrop of continuing high price volatility and inequality.

- Abundant natural resources (notably diamonds, but also copper, silver and nickel)
- Low public and external debt
- Significant foreign exchange reserves
- Political stability and strong governance place the country among the top countries in sub-Saharan Africa in international business environment rankings
- Member of the Southern African Customs Union (SACU)

- Dependence on the diamond sector (over 90% of exports)
- Inadequate infrastructure (water and electricity production and distribution)
- High inequality and unemployment, poverty remains relatively high
- Lack of skilled labour, small domestic market

BRAZIL

	BUSINESS CLIMATE	A4
POPULATION Millions of persons		212.6
GDP PER CAPITA US Dollars		7,564

2023 OUTLOOK

- GDP will weaken in 2023, as the sharp tightening of credit conditions should be felt more acutely (affecting private consumption and investments), and assuming some softening in commodity export prices.
- Conversely, estimates for the 2022/2023 grain crop point to a record output (also benefiting agricultural export volumes).
- Lula, from the left and already president twice, took office again in January 2023. He is expected to increase social expenditure and infrastructure investments. Nonetheless, this should lead to a higher fiscal deficit, further pressuring the already elevated public debt.

2023 OUTLOOK

- Economic growth will be low because of still strong inflation that will reduce the purchasing power of households and companies in 2023.
- Although Russia stopped energy exports to Bulgaria, the country can continue to function thanks to its diversified energy mix.
- The high inflation and the political deadlock will delay the accession of Bulgaria to the EMU.
- In October 2022, the third consecutive snap-election took place. The conservative party GERB came in first, but as the 2020 protest movement against the political system had started because of corruption of GERB politicians, the constitution of a viable coalition is not obvious.

- Major producer of gold (6th in Africa) and cotton (3rd in Africa in 2020)
- Member of the West African Economic and Monetary Union (ensuring the stability of the currency, the CFA franc, against the euro)
- Support from the international financial community (one of the first countries to benefit from the HIPC initiative)

- Economy highly exposed to climatic hazards
- Vulnerability to changes in cotton and gold prices
- High dependence on external aid
- Weak electrical infrastructure
- Very high poverty rate, increased by massive population displacement and critical food insecurity
- Large informal sector and weak business environment
- Presence of armed Islamist groups (foreign and domestic)

BURUNDI

COFACE ASSESSMENTS	COUNTRY RISK	D
	BUSINESS CLIMATE	E

POPULATION Millions of persons	12.2
GDP PER CAPITA US Dollars	274

2023 OUTLOOK

- After seven years of international financial sanctions, Burundi is renewing ties with foreign partners, pressed by financial and infrastructure needs.
- Faced with rampant inflation of imported goods, purchasing power is expected to remain among the lowest in the world, resulting in significant humanitarian needs.
- Mining projects could support the country's major accounts, but their materialisation remains conditional on the business environment, notably legal and logistical.
- Burundi still bears the scars of the civil war of 1990-2000, which led to an authoritarian regime still in place under President Evariste Ndayishimiye.

- Subsoil wealth (rare earths, nickel)
- Potential gains in agricultural productivity

- Fragile political institutions in a country marked by ethnic conflicts and military regimes
- Widespread extreme poverty
- High risk on debt and external accounts
- Dependence on international aid and recent end of diplomatic isolation
- Landlocked and lacking infrastructure
- Lack of diversification; subsistence agriculture
- Corruption and ineffective macroeconomic policies

CABO VERDE

COFACE ASSESSMENTS	COUNTRY RISK	C
	BUSINESS CLIMATE	B

POPULATION Millions of persons	0.6
GDP PER CAPITA US Dollars	3,749

2023 OUTLOOK

- As the Cabo Verdean economy is heavily dependent on tourism, mainly from Western Europe, its growth rate will remain subject to the European economic outlook.
- The war in Ukraine is fueling inflationary pressures in Cabo Verde, which imports the majority of its food and energy, but consumption will benefit from expatriate remittances.
- The country benefits from significant international financial support, in particular thanks to the three-year Extended Credit Facility granted by the IMF following the state of social and economic emergency declared in June 2022.
- Despite the establishment of a coalition, the president José Maria Neves, elected in 2021, should not face major political tensions.

- Fishery reserves
- Efficient banking and telecommunications services
- Stable political institutions
- Exchange rate cooperation agreement with Portugal, guaranteeing convertibility and a fixed rate with the euro, and a credit facility
- 20% of the country's energy consumption currently comes from solar panels and wind turbines, with a target of 50% by 2030

- Weak diversification of the economy and dependence on tourism
- Very high level of public debt
- Heavily dependent on the economic performance of Eurozone countries
- Ageing, poor-quality infrastructure
- Island location: dependent on food imports (85% of total imports) and energy products
- Exposed to climate change, volcanic and earthquake events, and hurricanes

2023 OUTLOOK

- Still in a gloomy global environment, the Cambodian economy should grow at a slightly faster rate in 2023.
- Public budget balance will remain in deficit with a still expansionary fiscal policy. However, public debt level is moderated. More concerns come from private sector indebtedness.
- Although expected to narrow with the rebound in tourism, the current account deficit will stay high. Project financing, FDI, as well as remittances and external financial aid should cover it.
- CPP is expected to conserve a large majority at the Assembly after general elections in July 2023.

2023 OUTLOOK

- 2023 growth outlook relies on consumption, in line with the abandonment of the zero-COVID policy, and housing. Slow consumption recovery and some property sector stabilisation are expected.
- Policy implementation risks remain. Bumpy reopening process, with temporary policy reversal, would bring new disruption.
- China expected to announce more support measures, including new property easing policies.
- Disinflation pressure will continue, and justifies PBOC maintaining accommodative monetary policy.

2023 OUTLOOK

- Economic growth will sharply decelerate in 2023, due to a high base of comparison, and as inflation remains elevated (eroding private consumption) and credit conditions further tighten.
- The external shortfall should improve somewhat, as lower domestic demand reduces imports, while still high energy commodity prices benefit exports.
- The leftist government of Gustavo Petro will focus on changing labour and pension system legislations, and negotiating with guerrilla groups to improve security and rural development.

- Ports on two oceans
- Large population (almost 50 million people)
- Plentiful natural resources (coffee, oil and gas, coal, gold)
- Significant tourism potential
- Large foreign direct investment level

- Shortcomings in road and port infrastructures due to historically low levels of investment and difficult topography
- Problematic security situation because of drug trafficking and illegal mining, as the 2016 peace agreement with FARC is implemented slowly, particularly in the countryside
- Structural unemployment, poverty and inequality, deficient educational and healthcare systems
- Still large twin deficits will keep the country vulnerable to changes in investors' mood

2023 OUTLOOK

- Growth will be driven by the mining industry, as production of copper and cobalt ramps up. Non-mining activity will remain lacklustre, as inflation (driven by food prices) weigh on consumption of poor households.
- The current account should remain in surplus as mineral prices remain favourable, while the oil bill moderates slightly.
- The public deficit should widen slightly owing to election-related spending in 2023. To secure a second term, Felix Tshisekedi will look to strengthen his coalition while maintaining stability, but the political landscape could turn increasingly volatile in the run-up to the elections.

2023 OUTLOOK

- After seven consecutive years of economic contraction, the recovery in energy prices is encouraging investment in hydrocarbons, particularly gas.
- Faced with a heavy debt burden, the country is taking advantage of favourable oil prices to restore its public finances, supported by an IMF programme since January 2022.
- Public consumption is not expected to rebound significantly, while deficiencies in health, education and transport infrastructure persist.
- Household purchasing power will remain constrained by inflation in 2023, fuelled by food imports and poorly compensated by a job-poor oil boom.

2023 OUTLOOK

- Growth is expected to slow as high inflation and tighter external and domestic financial conditions weigh on private consumption.
- The external environment will be less buoyant, but the continued rebound in tourism and technology will support exports.
- Fiscal consolidation should continue in line with the IMF programme and the fiscal rule. The reform of public employment, aimed at reducing the state wage bill, will reduce expenditure.
- Disagreements between President Chaves, elected in May 2022, and Congress could disrupt fiscal consolidation.

2023 OUTLOOK

- Growth should remain comfortable in 2023. Households will still benefit from the capping of basic food prices. Their income will depend on the performance of agriculture, expected to be correct. Investments in infrastructure and hydrocarbons will continue. On the other hand, exports should slow down, in line with sluggish global demand.
- Fiscal consolidation will be delayed due to measures to dampen inflation.
- An increase in premiums paid by world traders to cocoa producers is under negotiation.

2023 OUTLOOK

- Croatia's economic growth is set to decline sharply in 2023 due to high inflation and weak growth in its trading partners, which will weigh on consumption and tourism activity.
- The current account deficit will remain close to the equilibrium, as the surplus in the balance of services linked to tourism will no longer fully offset the deficit in the balance of goods.
- In matters of foreign policy, the government's position (centre-right HDZ) is likely to remain at odds with that of President Milanovic (centre-left SDP). However, the HDZ remains the most popular political party despite the corruption scandals.

2023 OUTLOOK

- The modest recovery continues into 2023, driven by a continued rebound in tourism.
- These revenues and the efficiencies of currency unification will help to alleviate currency shortages. However, they will continue to limit the recovery.
- Although the country has recently settled several defaults on its debt, the country does not have access to international capital markets and may have difficulty repaying its creditors.
- Already marked by social unrest in 2021 and 2022, inflation and shortages of necessities, exacerbated by Hurricane Ian (September 2022), will continue to fuel popular discontent.

- World's second largest shipping operator (2022)
- Almost energy self-sufficient (oil and gas in the North Sea and Greenland as well as numerous wind-energy parks)
- Niche industries with cyclically non-sensitive export goods (pharmaceuticals, wind turbines, food products)
- Well-managed public finances and large current account surplus
- Krone pegged to the euro

- Small open economy sensitive to external demand, especially from Germany and Sweden
- Strong fragmentation of parliament
- Very high household debt (255% of net disposable income in 2021)
- Public sector constitutes a significant part of the country's employment (30% of employees in first nine months of 2022)
- High private external debt (151% of GDP in 2021)

2023 OUTLOOK

- As regional hub, the Djiboutian economy will continue to benefit from its port services as well as the ongoing infrastructure projects around them.
- Its economic prospects are highly vulnerable to the trouble in Ethiopia on which almost all the cargo traffic of the port of Djibouti depends.
- The reduction of the deficits will depend on the Ethiopian evolution and the inflationary fallout from the Russia-Ukraine war making imports more expensive and requiring heavy subsidies.
- The country suffers from relative political and social stability due to the presence of corruption and widespread poverty.

2023 OUTLOOK

- Despite the rise in US interest rates, the dynamism of private investment in tourism will support activity in 2023.
- Despite being supported by tourism, falling unemployment and household support, household consumption will still suffer from inflation.
- In the run-up to the 2024 elections, household subsidies to combat high living costs will temper fiscal consolidation.
- Despite the inflation of the import bill and the fall in gold sales, the current account deficit will remain moderate and financed by FDI.
- Haitian insecurity and immigration will remain the main concern of the authorities.

2023 OUTLOOK

- Growth will slow in the 2022-2023 fiscal year, as domestic demand will be constrained by inflation and the tightening of economic policy, despite foreign investment attracted by privatisations.
- The contribution of foreign trade should be positive due to the growth in exports driven by LNG deliveries and the depreciation of the pound, despite the slowdown in tourism.
- Fiscal consolidation will be initiated within the framework of the programme financed by the IMF, without exempting recourse to costly domestic financing.
- The current account deficit will decrease thanks to the increase in Canal tolls and the slowdown in domestic demand.

2023 OUTLOOK

- Public debt remains on an unsustainable path. The high debt service generates large financing needs. In the absence of an agreement with the IMF, refinancing could prove difficult.
- The amortisation of external borrowing and the current account deficit will maintain pressure on foreign exchange reserves.
- Declining remittances, inflation and high interest rates will weigh on household consumption. Public and private investment will be held back by the uncertainty surrounding the country's ability to repay its debt.
- Despite the precarious economic situation, President Nayib Bukele remains popular thanks to his anti-crime policy.

2023 OUTLOOK

- Despite a peace agreement between the federal government and the Tigray People's Liberation Front (TPLF) (November 2022), appeasement is fragile. Ethnic tensions remain high.
- Security instability, high inflation and foreign exchange shortages will hamper growth. While growth is expected to accelerate as a result of reconstruction efforts and the recovery of agriculture in some of the conflict-affected areas, it will remain well below pre-2020 standards.
- Low foreign exchange reserves compromise the government's ability to service its debt and increase the risk of sovereign default. It hopes to obtain debt relief and is seeking an agreement with the IMF.

2023 OUTLOOK

- Household consumption will slow down markedly, in a context of high inflation, which will put a strain on their purchasing power, despite the limitation of the rise in gas and electricity prices (*energy shield*).
- In a context of high costs (inputs, wages, interest rates) and low demand, business insolvencies will increase.
- While he was re-elected in April 2022, President Macron (LaREM, centre-liberal) did not obtain an absolute majority in the subsequent legislative elections. He will thus be forced to negotiate deals, in particular with the right-wing Republicans, on every reform, auguring greater political instability.

2023 OUTLOOK

- In 2023, Gabon's economy will be mainly supported by oil exports of which the price is still high, followed by manganese and wood.
- The concomitant rise in imported food prices, coupled with high unemployment, will hamper private consumption.
- Gabon will continue its efforts to maintain its budget surplus while its current account deficit is expected to widen again as oil prices ease.
- Faced with a weak opposition, President Ali Bongo Ondimba, in office since 2009, remains favourite for the 2023 elections despite health concerns and his appearance in the Pandora Papers affair.

2023 OUTLOOK

- After having benefitted both from the recovery in tourism and from the impact of the arrival of the Russians who boosted services, construction and agri-food, growth should moderate due to weaker external demand and persistently high inflation which will hamper household consumption.
- After a strong improvement in 2022 due to exceptional inflows from Russia (capital and direct), the current account deficit should widen mainly due to the drop in exports and lower remittances.
- The budget deficit will improve slightly following the government's desire to reduce its expenditure for its budget consolidation project.

2023 OUTLOOK

- High inflation, supply-chain-bottlenecks, higher financing and production costs, and lower demand from abroad are leading the German economy into a stagnation.
- The current account surplus will recover somewhat due to lower goods imports and an improvement of the trade in services deficit.
- New support measures for households and companies including a gas price cap will increase the public deficit.
- The "traffic-light"-coalition (social democrats, liberals, environmentalist), keeping its pragmatism and compromises, will remain in office.

2023 OUTLOOK

- An agreement with the IMF should have been finalised in early 2023, being conditional on a debt restructuring beforehand.
- Fiscal tightening and maintaining high interest rates should reduce deficits but also weigh on domestic demand.
- Protests against the high cost of living can occur in order to put pressure on the government, but should not threaten political stability.
- Since 2019, Cocobod (Ghana) and the Conseil du Café-Cacao (Côte d'Ivoire) have continued to jointly claim "cost of living" and "country of origin" premiums from foreign buyers, without a definitive agreement so far.

2023 OUTLOOK

- After a resilient 2022, the economy will endure a sharp slowdown in H1 2023.
- Despite low direct dependence on Russia, high energy prices push imported inflation.
- Exposed to a recession in Europe through the trade channel (Europe = 61% of exports).
- Tensions with Turkey over migration and maritime territorial disputes will intensify as both countries face elections. Afterwards, there is a risk of divided parliament and snap elections.

2023 OUTLOOK

- Growth would decelerate in 2023. Expatriate remittances are expected to fall along with US activity, penalising private consumption.
- Despite the decline in tax revenues, improved tax collection would keep the government deficit at a moderate level.
- Despite the fall in remittances, the current account surplus would increase with the decrease in imports caused by the weakening of consumption.
- The possible disqualification of candidates for the June 2023 presidential elections would increase political uncertainty already fuelled by protests against government corruption and the lack of a stable majority in Congress.

- Financial support from the US
- Free trade agreements with the United States and the European Union
- High potential for tourism, agriculture (bananas, coffee, sugar), mining, hydroelectricity, geothermal energy
- High foreign exchange reserves (about 7 months of imports)
- Low level of public and external debt, especially in comparison with its regional peers

- Low tax revenues
- Weak infrastructure
- Low skilled labour force
- Corruption affecting the business environment
- Vulnerability to external shocks
- High dependence on remittance flows from expatriates in the US
- Security problems related to drug trafficking
- Social and political instability

GUINEA

COFACE ASSESSMENTS	COUNTRY RISK	C
	BUSINESS CLIMATE	D
POPULATION	Millions of persons	14.3
GDP PER CAPITA	US Dollars	1,128

2023 OUTLOOK

- In 2023, the economy should experience a slight acceleration in growth, driven mainly by the mining sector.
- Household consumption is expected to grow moderately, thanks to the appreciation of the Guinean franc, which will keep inflation in check.
- The trade balance will remain in surplus due to mining exports offsetting purchases of mining equipment, but the primary income account deficit is expected to widen with increased repatriated profits from mining companies.
- The current account deficit will be financed by FDI, mainly from China.
- A military junta criticised by regional bodies and increasingly contested by the street, despite the repression.

- One third of the world's bauxite reserves
- Iron, gold, diamond, uranium and oil deposits still largely unexploited
- Significant hydroelectric potential

- Dependence on mining and energy prices
- Dependence on Chinese demand for bauxite
- Low government revenues (13% of GDP)
- Lack of infrastructure, especially in the electricity and transport sectors
- High poverty (44% of the population)
- Difficult business environment
- Structural weakness in agriculture

2023 OUTLOOK

- As the 3rd largest commercially recoverable oil reserve in Latin America and the Caribbean, the country's economic performance will continue to be stellar thanks to rising oil sector output.
- Non-oil GDP will also experience a strong recovery thanks to the dynamism of the mining, construction and services sectors.
- The oil windfall will further strengthen the external and public accounts, and the public debt, of which the ratio is the lowest in the region, will be further reduced.
- Despite still significant corruption, the current government is ideally positioned to use the oil windfall for the socio-economic transformation of the country.

- Attractive prospects for investors in mining, hydroelectric power and agriculture
- Abundant offshore oil and gas reserves, under development since 2020
- Member of the Caribbean Community and Common Market (CARICOM)

- Dependence on natural resources (gold, bauxite, sugar, rice, wood and, most importantly, oil since 2020)
- Inadequate transport, electricity, education and health infrastructure
- Low-skilled local labour force and massive emigration of skilled workers
- Sensitivity to climatic events
- Dependence on international creditors
- High crime rate linked to drug trafficking, in a context of poverty and corruption

2023 OUTLOOK

- Since the assassination of President Jovenel Moïse (July 2021), the country has been plunged into an economic, political and security crisis.
- The deteriorating political and security situation and the decline in remittances are expected to prolong the recession.
- Due to funding constraints and the low tax base, debt monetisation will continue, fuelling inflation.
- The current account deficit will widen due to a higher import bill and a decline in expatriate remittances.

2023 OUTLOOK

- In a context of high inflation, and despite increased public investment, the US slowdown will weigh on activity. Subsidies for basic necessities will not allow the central bank to achieve its inflation target (3 to 5%).
- Subsidies to households will limit the reduction of the public deficit. Its financing would depend on multilateral loans (IMF, CABEL).
- Falling remittances and rising energy and food bills will widen the current account deficit.
- Although Xiomara Castro remains popular, the lack of a presidential majority in Congress would hamper her governmental action.

- Privileged relationship with the US (preferential trade agreement, military presence)
- Agricultural resources
- Support from international donors

- Dependence on the US economy (exports, FDI and expatriate remittances)
- Dependence on fuel and grain imports
- High criminality and corruption against a background of poverty, food insecurity and drug trafficking
- High informality of the economy: 70% of the working population is concerned
- High emigration fuelled by insecurity
- Fiscal resources still too low (16.9% of GDP in 2020)
- Unemployment rate still above its pre-pandemic level
- Vulnerable to climatic events such as hurricanes and tropical storms

2023 OUTLOOK

- After GDP contracted in 2022, we expect a modest recovery in 2023, helped by the gradual post-COVID reopening.
- However, downside risks to growth include a real estate downturn, rising interest rates, investment weakness, an incomplete reopening, and softening external demand.
- Underlying price pressures are expected to remain mild, though imported inflation, especially in food and energy-related items, would be higher.
- Job market should continue to improve on the revival of domestic economic activities, and tourism.

2023 OUTLOOK

- The economy is expected to be on the verge of recession in 2023, as household consumption will be eroded by high inflation while investments are expected to suffer from high interest rates.
- The relaxation of several price caps by the government led inflation to exceed 20% in late 2022, with double-digit levels likely to remain in 2023.
- The budget deficit is expected to narrow thanks to additional windfall profits and sectoral tax revenues. However, pressure will remain on the expenditure side with costly imported energy.
- The transfers from the EU budget due to the disputed rule-of-law issues are still uncertain.

2023 OUTLOOK

- In 2023, the Icelandic economic activity is set to slow down due to a decrease of tourist arrivals and weaker growth of goods exports over winter and early spring.
- The inflationary pressures (mostly imported) will still weigh on households' purchasing power. However, the central bank has counteracted them by increasing its key interest rates.
- The current account will remain in deficit in 2023 because the services trade surplus will not balance out the trade in goods deficit.

2023 OUTLOOK

- India's growth outlook for 2023 supported by domestic demand, with services rebound, sustained manufacturing growth, and robust credit expansion.
- Global slowdown to weigh on India's export prospects of external-oriented manufacturers and IT services firms.
- Headline inflation moderating, but price pressures broaden to more goods and services. Consumer inflation to remain elevated.
- Current account deficit to narrow as global energy prices moderate, while rising policy rate and subsidy burdens will maintain fiscal pressure.

2023 OUTLOOK

- Growth will continue to be boosted by the reopening of the economy, which allows the recovery in services, especially those related to tourism.
- However, less support from trade is expected as commodity prices normalise and global demand deteriorates.
- While Bank Indonesia (BI) is expected to continue raising rates, inflation will remain sustained following the rise in the subsidised fuel prices in September 2022.
- Investor confidence could be weakened by a reform of the BI that changed its mandate and allows it to finance government borrowing in the event of an economic crisis.

2023 OUTLOOK

- The decline in oil prices and external competition will weigh on Iran's growth in 2023.
- The recovery in private consumption will remain limited due to hyperinflation.
- The budget deficit is expected to narrow aided by still high energy prices and cuts in government spending.
- The nuclear agreement would not resume before end-2023 at the earliest, especially as Iran's current higher nuclear activity increases tensions with the West. Growing ties with Russia may also interfere.
- Protests that erupted in September 2022 are another key challenge if they persist and intensify.

2023 OUTLOOK

- The slowdown in the oil sector will drag down growth in 2023. Less oil revenues will limit public consumption.
- Inflation is expected to ease in 2023 in line with lower food (and energy) prices.
- The twin surpluses will shrink due to the fall in hydrocarbon prices and slowdown in Iraq's oil production. Public subsidies are likely to increase. The currency peg to dollar will be maintained.
- While the long-awaited election of a president, appointment of a prime minister and formation of a government has reduced political uncertainty, structural economic and political issues are likely to persist.

2023 OUTLOOK

- Growth will fall sharply, due to the decline in household consumption - whose disposable income will be affected by persistent high inflation - and to the recession in its main partners (UK and Eurozone).
- However, the country should once again be one of the most resilient in the region, thanks to the presence of multinationals specialising in less vulnerable sectors.
- Sinn Féin (nationalist) has an irresistible momentum. At the end of 2022, with 36% of the vote, it alone had as many votes as the centrist coalition, which nevertheless seems capable of completing its mandate until 2025.

2023 OUTLOOK

- The Italian economy will tip into a recession in the winter of 2022/23.
- Italy has strongly reduced its dependence on Russian gas to 10% of total gas imports (from a pre-war level of 40%).
- Exposed to a recession in German trade.
- Government measures (5.1% of GDP) have been deployed to compensate the effects of the energy crisis.
- A right-wing coalition led by Giorgia Meloni took power in October. Meloni is seeking cooperation with the EU, but it is unclear if this will last as she loses support.
- Given Italy's remarkably high public debt ratio, it is highly sensitive to increases in sovereign yields.

- Recovering tourism industry providing a strong growth pillar
- Increasing efforts to combat tax evasion and reduce informality
- Bank asset quality has significantly improved
- Comparative advantage in high-end food products, textiles and clothing, furniture, machinery
- European support creates opportunity for modernisation

- Public debt still very high
- High reliance on natural gas (43% of primary energy mix in 2021)
- Prevalence of small, low-productivity companies (more than 90% of firms have 10 employees or less)
- Manufacturing sector vulnerable to supply chain and energy crisis
- Strong regional disparities, organised crime still influential in the South

2023 OUTLOOK

- Activity is expected to decelerate in 2023 as consumption is held back by inflation-driven income compression.
- The rebound in tourism, investments to develop it, but also mining activity, with the resumption of a major bauxite plant planned, will be the main drivers of activity.
- With a comfortable parliamentary majority (49 out of 63 seats), the government is expected to continue fiscal consolidation efforts in 2023, helping to reduce the debt ratio, which will remain high.
- Criminality could justify an extension of the state of emergency declared in 7 out of 13 regions since November 2022.

2023 OUTLOOK

- Japan's growth to get modest boost from consumption as external demand weakens.
- Higher real wage growth, catch-up demand, excess savings, and government financial support to drive consumers.
- Overseas investment income, and services inflows linked to tourism recovery should keep current account in surplus.
- CPI will remain at multi-decade highs. Increased economic costs of ultra-easy policy should push BOJ to consider a gradual move towards policy normalisation.

2023 OUTLOOK

- Growth will moderate despite rising tourism revenues and resilient gold sales, as global sluggishness will reduce phosphate and potash sales, and slow garments exports.
- The central bank will continue to follow the US Fed's tightening due to the currency peg, weighing on private consumption. Inflation will only marginally decrease.
- The reshuffled government will implement the IMF programme to ensure the continuity of international support. Rising tourism revenues and remittances from the GCC and the US will narrow the current account deficit, despite a wider trade deficit.

2023 OUTLOOK

- After a slowdown in 2022, growth is expected to pick up in 2023, driven by household consumption, fixed investment, and an expected increase in oil from the Tengiz field.
- The slowdown in inflation, as well as the government's budgetary policy (increase in the minimum wage and retirement pensions) will have a positive impact on household consumption.
- The current account balance will remain positive, but will deteriorate: the increase in oil exports will be offset by imports of equipment and intermediate goods.
- The budget balance will improve thanks to an increase in tax revenue, but will remain negative.

2023 OUTLOOK

- In 2023, activity will be supported by investment reinforced by political calm and credit, while consumption will be subject to the various influences of inflation, drought, remittances from expatriates and tourism. Exports of tea, coffee and flowers should benefit from favorable prices, but are exposed to the European slowdown.
- The slow budgetary consolidation will continue, which, associated with growth, will make it possible to stabilise debt load, without dispensing with recourse to domestic and multilateral financing.
- The current account deficit will persist, with the reduction in the energy bill and the recovery in tourism being offset by the strength of equipment purchases.

2023 OUTLOOK

- Lower oil price and production, negative base effects, and tighter monetary policy will reduce growth.
- Inflation will slow due to monetary tightening, government subsidies and the moderation in imported prices.
- Slower growth, decline in oil revenues, and subsidies will reduce the fiscal surplus. The current account will remain in surplus on the back of oil prices above the external breakeven oil price (~USD 45/barrel).
- Elections of September 2022 are unlikely to resolve the political gridlock. This would make the operating environment less attractive for foreign investors.

2023 OUTLOOK

- Growth should slow down, driven by a drop in household consumption and a deterioration in net exports.
- Inflation will remain high, which will hamper household consumption. It will also be affected by lower transfers from Russia.
- The current account balance will improve with a potential recovery in gold exports, but will remain in deficit. The decrease in transfers from Russia will have a negative impact.
- The budget deficit will remain high, following a sustained increase in government spending in 2022 (salaries, pensions) and a reduction in its income (notably linked to gold).

2023 OUTLOOK

- In 2023, economic growth should remain affected by skyrocketing prices and supply disruptions linked to towering import bill and a lack of foreign exchange.
- Laos' fiscal position will remain weak. Public debt is mainly external and denominated in USD, while the kip has depreciated significantly. Foreign exchange reserves are low.
- The current account is expected to remain in deficit and even widen.
- In this context, there are concerns about debt to China. In addition to trade links, the country is still heavily dependent on Beijing for large infrastructure projects.

2023 OUTLOOK

- In 2023, growth will be hampered by the slowdown in South Africa and tighter monetary policy.
- While slightly easing in 2023, inflation will remain high in the medium term, due to still-high energy prices and a weaker rand.
- The fiscal deficit is expected to shrink, as tax revenues will be bolstered by improved revenue-mobilisation measures. The import bill will continue weighing on the current account deficit.
- Sam Matekane and his recently founded Revolution for Prosperity party won the October 2022 parliamentary election, but failed to secure a majority, much needed to end the political deadlock.

- Mineral resources (mostly diamonds)
- Significant water resources, hydroelectric potential (LHWP-II Project)
- Relatively developed textile-clothing industry
- Tourism potential
- Well-capitalized banking sector
- Loti pegged to the South African rand

- Heavily dependent on South Africa in terms of power supply, trade and remittances from migrant mine workers (22% of 2019 GDP)
- Agriculture vulnerable to frequent climate events (droughts, floods, storms)
- Fiscal outlook highly subject to volatility in SACU transfers
- Political instability, weak governance
- High poverty and unemployment
- High criminality
- Widespread HIV and significant presence of tuberculosis

2023 OUTLOOK

- In 2023, Liberia's economic recovery will intensify thanks to exports and high prices of products from forestry, agriculture and especially mining, which also benefits from significant investments.
- Consumption is facing inflation and the recurring threat of a shortage of banknotes but is, among other things, supported by remittances flows from abroad.
- Political and social stability could be put to the test following multiple criticisms of the administration of George Weah. The absence of significant opposition should nevertheless consolidate his re-election in October 2023.

2023 OUTLOOK

- The country remains divided between the Government of National Unity (GNU) in Tripolitania and the one supported by Marshal Haftar in Cyrenaica.
- Stemming from the 2020 ceasefire, the GNU has agreed with Turkey to a military agreement against permits to explore for oil in disputed waters.
- Petroleum production in the central "oil crescent" was blocked in 2022, amid a dispute over revenue sharing. It will hardly increase in 2023.
- Political and security instability weighs on near-term prospects.
- Little investment is expected. However, an USD 8 billion offshore gas project with Italy's Eni is discussed at the end of 2022.

2023 OUTLOOK

- Lithuania is set for only modest economic growth in 2023, as the new EU sanctions force it to reallocate and diversify its foreign trade.
- Lithuania was one of the first countries to stop energy imports from Russia, thanks to the LNG-terminal on the coast in Klaipeda.
- Inflation reached one of the highest levels in the EU in 2022, which will continue to hamper private household consumption in 2023.
- Public deficit will increase due to higher costs for support measures and refugees.
- The government of PM Simonytė gained support due to its hawkish stance against Russia, but lost it again due to the inflation.

2023 OUTLOOK

- Household consumption will slow down sharply, in a context of high inflation, which will put a strain on their purchasing power, despite the 1-point reduction in VAT and the limitation of the rise in gas and electricity prices (*Solidarit tspak 2.0*).
- The financial sector will be affected by the very uncertain environment.
- The Grand Duchy is vulnerable since, before the war, it imported 40% of its gas from Russia and its gas market is integrated with Belgium.
- According to a poll conducted in mid-2022, the ruling coalition would emerge stronger from the parliamentary elections scheduled for autumn 2023 (+1 seat compared to 2018).

2023 OUTLOOK

- The recovery will be driven by high mineral and agricultural export prices, rising consumption and investment spending on infrastructure, but will remain below the pre-COVID-19 pace due to the rising import bill, high inflation and a tourism recovery constrained by the international context.
- Although shrinking, the twin deficits will remain large and will still be mostly financed by international aid and foreign direct investment.
- The presidential election will take place in November 2023 and could exacerbate tensions and the fragility of the country in a complicated social context.

2023 OUTLOOK

- Already marked before the war in Ukraine, food insecurity worsens in 2022-23 with food inflation and higher fertilizer prices, despite the release of 20,000 T of Russian fertilizer confiscated by the EU.
- The IMF released USD 88 million via its “food emergency” credit window, but no traditional scheme is expected in the absence of debt restructuring.
- The United States announced in October 2022 a USD 350 million loan for rural development.
- Financing difficulties and unsustainable debt have led Lilongwe to let electricity, fuel and maize prices slip, raising fears of unrest.

2023 OUTLOOK

- Economic growth supported by the mining sector (iron and gold), agriculture, fishing and, from the end of 2023, natural gas shared with Senegal. Investments in the processing of agricultural and fish products could increase.
- A slight public deficit has emerged, due to unfavourable iron prices and fuel subsidies.
- Current account deficit linked to imports of equipment for the exploitation of the gas field and financed mainly by FDI.
- A new, very inclusive electoral system and anti-corruption efforts.
- Possible deterioration of relations with Mali, improvement with Senegal, good relations with the Gulf States.

- A much lower risk of terrorism than its Sahelian neighbours
- Support from donor countries and international organisations
- Some macroeconomic stability, even in a difficult context
- Mineral resources (iron ore, gold, copper, natural gas) and fisheries
- Potential in renewable energies
- Relatively large domestic budgetary resources

- Poor governance: high corruption, lack of insolvency treatment
- Poorly diversified economy, vulnerable to commodity prices and weather
- Low inclusive growth, high poverty (44% of the population) and high unemployment
- Very little arable land, more than 2/3 of the country is deserts
- Persistent community divisions: discrimination against the Haratine population

2023 OUTLOOK

- After the impact of the pandemic and a rebound in 2022, tourism (mainly upmarket) should stabilise at a satisfactory level in 2023, despite the European sluggishness.
- Despite the increase in social benefits and the decline in unemployment, imported inflation will weigh on purchasing power.
- The current account deficit is expected to narrow thanks to tourism, free trade agreements with India and China supporting transshipment, and financial services benefitting from the removal of "tax haven" lists.
- As Port Louis favours local financing of its public deficit, the prospect of a possible foreign exchange crisis is averted, but not that of over indebtedness.

2023 OUTLOOK

- GDP growth will lose steam in 2023, pulled down by weaker US activity affecting manufacturing and consumption (via lower remittances from expatriates), and tighter credit conditions.
- Conversely, public expenditure is likely to accelerate somewhat, with higher social expenditures and resources for president Obrador's key infrastructure projects.
- Consultations requested by the US and Canada under the USMCA trade deal over Mexico's energy policy will extend into 2023. If an agreement is not reached, a resolution panel could be requested, which could prompt retaliatory tariffs.

2023 OUTLOOK

- The economy will struggle to recover from a recession caused by higher energy and fertiliser prices, power cuts (reduced Russian gas supplies) and the collapse of trade with Russia and Ukraine. However, the slowdown in inflation will ease the strain on household consumption.
- The current account balance, still very negative, will be financed by the IMF and the EU.
- The public external debt (mainly with international organisations) will increase, in order to provide support to the population whose living conditions have deteriorated sharply in 2022, leading to protest from pro-Russian against a pro-European government.

2023 OUTLOOK

- In 2023, economic growth is expected to accelerate as private consumption continues to recover, the easing of China's border restrictions boosts trade, and foreign investment inflows, particularly in the mining sector.
- Despite lower fiscal deficit expected in 2023, sovereign risk remain very high in a context of elevated imported inflation, rising interest rates and depleting FX reserves.
- Current account deficit will remain wide but large FDI inflow, notably in mining, should cover it.
- As a landlocked country highly dependent on Russian supply, especially in energy, Mongolia did not distance itself from the Kremlin.

- Development of colossal mining resources (coal, copper, gold)
- Strategic geographical position between China and Europe/Russia
- Potential for diversification of production, including agribusiness, and tourism
- Important donor support (4.8% of GDP in 2019)

- Small economy vulnerable to changes in commodity prices and Chinese demand
- Landlocked country
- Internal political dissensions
- Massive land degradation, 90% of the vast grasslands prone to desertification
- Alarming level of corruption and fragile governance
- Risks associated with rising inequalities due to less inclusive mining development
- Insufficient foreign exchange reserves to absorb external shocks

MONTENEGRO

COFACE ASSESSMENTS	COUNTRY RISK	C
	BUSINESS CLIMATE	A4

POPULATION Millions of persons	0.6
GDP PER CAPITA US Dollars	9,433

2023 OUTLOOK

- Faced with a poorly diversified economy and emigration due to poverty, the government is promoting social measures, benefitting the purchasing power of households in 2023.
- Construction remains a growth driver, thanks to the infrastructure and accommodation needs of a dynamic tourism sector.
- Structurally in deficit due to the trade deficit, the current account would stabilise in 2023 thanks to tourism, despite a drop in expatriate remittances and the increase in imports.
- Torn between Serbia and the EU, Montenegro is struggling to find a governing majority.
- There are delays in cleaning up the accounts and public enterprises.

- Growing tourism
- EU application supported by economic reforms (Europe Now programme)
- Use of the euro to avoid exchange rate crises

- Small, undiversified economy with a weak export base and dependence on tourism
- Structural current account deficit with a large trade deficit, which has led to a high external debt
- Corruption, informal economy, emigration and unemployment
- Use of the euro may lead to asymmetric shocks, with no early prospect of participating in European governance

POPULATION Millions of persons	36.3
GDP PER CAPITA US Dollars	3,934

2023 OUTLOOK

- Agriculture is still suffering from a lack of water (30% rainfall deficit in mid-November 2022), especially irrigated export crops.
- Tourism rebounds since 2022 as COVID-19 recedes and restrictions are lifted.
- Fuelled by energy and food imports and the depreciation of the dirham, inflation is hitting households despite social measures.
- The increase in public spending should be offset by better tax collection, while the slight rise in policy rates should have little effect on the public deficit.
- Rabat is doubling its military budget since 2021, to build a defence industry supported by Israel.

- Favourable geographical position, close to the European market
- Strategy to move upmarket and diversify production in industry
- Political stability and commitment to reform
- Growing integration into the African market
- Support from the international community, especially Europe
- Significant and emerging market

- Economy dependent on agriculture (12% of GDP and 30% of the population), and therefore on climate and water availability
- Competition from other Mediterranean countries such as Turkey or Egypt
- Social and regional disparities, between cities and the countryside, and widespread poverty
- High unemployment, especially among young people, and low participation of women in the labour market
- Low productivity and competitiveness

2023 OUTLOOK

- While agriculture, exports (including LNG since late 2022) and the resumption of LNG projects will support growth, it will be moderated by still-high inflation and monetary tightening.
- Despite efforts of fiscal consolidation, debt servicing, defence spending, the public-sector wage bill and subsidies to support the most vulnerable will keep the deficit high. Debt sustainability remains at risk.
- The situation in the Cabo Delgado province remains precarious (TotalEnergies could lift the force majeure in Q1 2023), as authorities struggle to contain the Islamist insurgency. Further delays to LNG projects would enhance risks on external financing.

2023 OUTLOOK

- The strong relationship with Russia alienates, even more, Myanmar's relations with the West.
- GDP will continue to recover slowly in FY2023 as the negative effects of the military coup would persist, while the economic difficulties that emerged following the war in Ukraine will likely remain.
- The public debt, which has surged since the coup d'état, will continue to rise.
- Since the putsch, deficits of the current account are likely not entirely financed because of a hit in foreign investments. This leads to depleting international reserves, triggering liquidity issues.

2023 OUTLOOK

- Diamond mining and tourism recovery will support growth, but uncertainty on agricultural production, limited fiscal space and monetary tightening will weigh on the outlook.
- While stronger export performance will partly offset high imports costs, weaker SACU receipts and a potential drop in European ODA, the current account deficit will remain significant.
- Despite an erosion of its popularity, SWAPO remains dominant in the run-up to the 2024 elections. Netumbo Nandi-Ndaitwah has been appointed vice-president of the party. She is likely to succeed Geingob who has reached the two-term limit.

- Growth will slow slightly as private demand is affected by rising interest rates and still high commodity prices.
- Nevertheless, tourism-related services will continue to recover and industrial production will be driven by hydroelectricity.
- The large current account deficit, covered by international financing and foreign reserves, will narrow as imports moderate and tourism recovers.
- After elections in December 2022, which resulted in a hung parliament, Pushpa Kamal Dahal was appointed Prime Minister for the third time.

2023 OUTLOOK

- In 2023, the Dutch economy will suffer from lower demand from Western Europe (exports as well as re-exports) and muted private consumption.
- A price cap on energy prices and the increase in minimum wage should support private households but also increase the public deficit noticeably.
- The government is losing a lot of its popular support over the new rules to reduce nitrogen-based emissions as well as a possible extension, or even ramping up, of gas-extraction in Groningen, despite the already announced exit due to earthquakes.

2023 OUTLOOK

- The economy is set to decelerate further in 2023 amid high inflation and rising interest rates.
- Private consumption will be constrained by elevated inflation, declining housing prices and high level of household indebtedness.
- After higher public expenses during the fiscal year ending in June 2022, the government is set to return to the path of fiscal consolidation. Public debt remains relatively low compared with most developed economies.
- The current account deficit is expected to remain high but is traditionally financed by large financial and capital inflows.

POPULATION	Millions of persons	6.5
GDP PER CAPITA	US Dollars	2,141

2023 OUTLOOK

- Household support measures, agricultural and mining exports will drive more modest growth in 2023.
- Lower remittances from the US will weigh on household consumption, while manufacturing exports to the continent will fall.
- Tight fiscal policy will continue. Deficits in public enterprises and the social security system will remain high, with the risk of aggravating under investment by the public sector.
- Weakened foreign exchange reserves, tightening US sanctions and withdrawal from the Organisation of American States would increase dependence on Chinese external financing.

- Mineral (gold), agricultural (coffee, sugar, meat) and fishery (shellfish) resources
- Membership of the Central America/USA and Central America/EU free trade areas

- High vulnerability to natural disasters
- Increased social tensions since the 2018 anti-austerity protests
- Poor business environment and institutional weaknesses: concentration of power in the executive and the Sandinista party, corruption
- US-dependent economy (dollarisation, investment, trade, remittances)
- Diplomatic isolation from the international community since the disputed 2018 presidential election (Western sanctions)

2023 OUTLOOK

- Growth will remain strong in 2023. Infrastructure construction will continue to be supported, notably by the oil boom. The recovery in the agricultural sector will boost consumption.
- Inflation should remain moderate thanks to the restrictive policy of the Central Bank of West African States.
- A budget deficit financed by international aid will be significantly reduced thanks to IMF-supported fiscal consolidation, despite social and security emergencies.
- The trade deficit should narrow, mainly on the back of oil exports
- Insecurity due to terrorist groups and political fragility due to social discontent.

- Seventh largest producer of uranium in 2021
- Net exporter of gold and petroleum products
- Investment efforts in agriculture and infrastructure
- Member of the West African Economic and Monetary Union (WAEMU) and the Economic Community of West African States (ECOWAS)
- Financial support from multilateral creditors

- Economy vulnerable to climate shocks and fluctuations in commodity prices
- Economy still largely dependent on subsistence agriculture
- Rapidly growing population, severe poverty (lowest HDI in the world), chronic food crisis situation
- Defective system for collecting taxes and customs duties
- Endemic corruption and importance of the informal sector
- Difficult security situation and terrorist attacks

2023 OUTLOOK

- Growth will slow in 2023. Domestic demand will stagnate due to inflation and higher credit prices. The contribution of foreign trade will be positive thanks to increased oil sales and reduced purchases of refined products. While agriculture and agribusiness will suffer from the October 2022 floods, the digital economy will thrive.
- The public deficit will be reduced with the ending of fuel subsidies after the general elections of February 2023.
- Import restrictions and obstacles to the repatriation of profits will not prevent the gap between the official and parallel exchange rates from persisting.

2023 OUTLOOK

- Since the start of the war in Ukraine, the Norwegian gas and oil exports have been critical to European energy security and this will continue in 2023.
- The average inflation rate is relatively low compared to the Scandinavian and Western European neighbours. However, wages are noticeably increasing.
- The current account surplus reached record high due to a strong demand for energy products in combination with soaring energy prices.
- Fiscal conditions are supported by the sovereign wealth fund benefits. Therefore, the total budget surplus remains the highest in decades.

2023 OUTLOOK

- Declining hydrocarbon output and revenues, tightened financial conditions, and stagnant government spending will weigh on growth.
- However, decelerating inflation and recovering tourism will sustain private consumption, while investments by government-related entities will also contribute positively.
- Lower hydrocarbon revenues and sticky expenditures will shrink the fiscal surplus. The same goes for the current account as lower hydrocarbon receipts and sustained remittances outflows will not be balanced by higher tourism revenues and lower interest payments due to debt repayments.

2023 OUTLOOK

- The resource sector is expected to continue to drive growth, but disruptions in the mining sector and on supply, as well as a deterioration of the health situation, are downside risks.
- Inflation to moderate on easing pressure on supply chains, and fading price impact of election-related spending.
- Current account surplus to remain large due to high commodity prices and subdued imports, but large debt repayments contributed to FX shortages.
- Fiscal deficit is projected to narrow on expected fiscal consolidation.

2023 OUTLOOK

- In 2023, activity should be mainly led by agriculture, which was strongly affected by a severe drought in 2022.
- The easing of weather woes will also contribute to the rebound of transport and power generation.
- The current account should switch back into surplus in 2023, as the trade balance returns into positive territory.
- The fiscal deficit will narrow mostly due to the rebound in activity.
- Despite the weak political capital of the incumbent president, his long-dominant conservative Partido Colorado should nominate his successor in the 2023 elections.

2023 OUTLOOK

- GDP will lose some steam in 2023, amid the delayed impact of tighter credit conditions, still sticky inflation, and assuming some easing in mineral and agricultural commodity prices (decelerating exports growth).
- In addition to deteriorated financing conditions, recurrent social protests and blockades around mining fields and the political gridlock should affect private fixed investments.
- The external shortfall should narrow, notably owing to a moderation in profit repatriation.

- Mineral, energy, agricultural, and fishery resources (including copper, gold, zinc, mineral fuels, fish, coffee, tea & spices)
- Low level of public debt
- Independence of the central bank and strong foreign exchange reserves

- Dependent on commodities and demand from China
- Underdevelopment of credit (47% of GDP)
- Inadequate infrastructure, healthcare, and educational systems
- Huge informal sector (76% of jobs), tax evasion keeping tax revenues low (16% of GDP)
- Regional disparities feeding popular discontent
- Weak political environment

PHILIPPINES

COFACE ASSESSMENTS	COUNTRY RISK	B
	BUSINESS CLIMATE	B

POPULATION Millions of persons	110.2
GDP PER CAPITA US Dollars	3,576

2023 OUTLOOK

- Growth will decelerate in 2023, dragged by higher interest rates, sustained inflation and poor export prospects.
- Despite a higher budget, the fiscal deficit should narrow thanks to revenue enhancement measures and the expiration of COVID-related tax reliefs.
- The current account deficit will persist as expatriates' remittances and rising tourism receipts will not offset the wide trade deficit. International reserves could therefore be pressured but are at an adequate level.
- Ferdinand Marcos Jr, elected in 2022, should continue to maintain balanced ties with China and the U.S, despite tensions between the latter.

	BUSINESS CLIMATE	A2
POPULATION Millions of persons		37.8
GDP PER CAPITA US Dollars		17,946

2023 OUTLOOK

- Poland's economy will record weak growth in 2023 as inflation is expected to remain very high with rising production costs passed down to consumers, while increased interest rates have led to tighter financial conditions.
- The public deficit will increase due to measures aimed at reducing the impact of high energy prices on the economy.
- Next parliamentary elections are scheduled for autumn 2023, with latest polls indicating another victory for the right-wing party Law and Justice (PiS). Externally, the relationship with the European Commission remains tense, making the disbursement of EU recovery funds still uncertain.

- Proximity to Western European markets
- Price competitiveness; qualified and cheap labour force
- Integrated into the German production chain
- Diversified economy (agriculture, variety of industries, services)
- Resilient financial sector

- Inadequate level of investment; domestic savings rate too low
- Weakness in R&D; high content of imports in exports
- Developmental lag of Eastern regions
- Structural unemployment, low level of female employment
- The EU rule-of-law dispute

PORTUGAL 

COFACE ASSESSMENTS	COUNTRY RISK	A3
	BUSINESS CLIMATE	A2
POPULATION Millions of persons		10.3
GDP PER CAPITA US Dollars		24,296

2023 OUTLOOK

- Activity will slow down significantly in 2023, due to the sharp deceleration in households' consumption, who will see their purchasing power decline due to high inflation, and whose confidence was, at the end of 2022, at its lowest since the financial crisis and the pandemic.
- Being isolated from the rest of the continent (limited gas interconnection between the Peninsula and France), the country will have to reduce its energy consumption less. In addition, gas prices are relatively lower (MIBGAS market), although still well above historical levels.
- Tourism, which had returned to its 2019 level by the summer of 2022, should remain buoyant.

- Potential in renewable energy (hydroelectric, wind and photovoltaic)
- Above-average absorption of European funds
- Low labour costs and nascent manufacturing industry (food products, electronics)
- Comparatively stable governance
- Increasingly attractive to foreign talent
- Buoyant tourism industry

- Underdeveloped manufacturing sector with low-to-medium range added value
- Slow-functioning legal system
- Poor quality of bank portfolios, high bad debt rates
- Deepening infrastructure gap

QATAR

COUNTRY RISK **A4**

BUSINESS CLIMATE **A3**

POPULATION
Millions of persons **2.6**

GDP PER CAPITA
US Dollars **68,622**

2023 OUTLOOK

- The Qatari economy will continue to expand in 2023 albeit at a slower pace due to global stagnation risks, lower fixed investments and hydrocarbon revenues.
- Fiscal and current account surpluses should shrink in line with reduced oil and gas prices, despite moderate growth in production.
- Higher tourism inflows as Qatar, after the World Cup, will host the Asia Cup and the World Horticultural Expo in 2023.
- Very limited threats to political stability. Qatar has established balanced diplomatic relations with various countries including Egypt, Turkey and Iran. Yet, further improvement of ties with Iran may create tensions with the other Gulf States and the US.

2023 OUTLOOK

- The Romanian economy is set to slow down in 2023 due to high inflation, tighter financial conditions and economic slowdown of trade partners.
- The fiscal consolidation should be undermined by the nearing electoral cycle of 2024 as strong support measures will be favoured.
- The prime ministership rotation (May 2023) can harm the political reform continuity as both centre-left and centre-right coalition parties have specific goals.
- NATO continues to bolster its military presence in the Black Sea region and deploy a multinational battlegroup to Romania.

- Strategic partner in the context of the Ukraine war
- Important agricultural potential: wheat, barley, colza, etc.
- Limited energy dependence thanks to local coal, oil, gas and uranium, 57% of electricity from renewables
- Diversified and competitive industry thanks to cheap labour
- Well integrated within the Eurozone through trade and investment linkages, but not a member State

- Twin fiscal and current-account deficits
- Second lowest GDP per capita in the EU
- Large underground economy
- Slow administrative and legal processes, corruption, bureaucracy, poor management of the workforce and procurement

RUSSIA 

COFACE ASSESSMENTS	COUNTRY RISK	D
	BUSINESS CLIMATE	D

POPULATION Millions of persons	145.6
GDP PER CAPITA US Dollars	12,219

2023 OUTLOOK

- Russia will remain in recession in 2023 as its economy will suffer from the increasing range of Western sanctions and decoupling from the Western economy.
- Monetary policy has been markedly relaxed in response to declining inflation and depressed demand. Capital controls, combined with falling trade volumes and the dynamics of the current account have supported the rouble. Yet, inflation will remain high, eroding real wage growth.
- Investment will be depressed by lacking Western capital and government spending on domestic security and defence.
- Rising war expenditure will keep the fiscal balance in deficit.

- Abundant natural resources (oil, gas, wood, cereals and metals)
- Market size and skilled labour force
- Increasing cooperation links with neighbouring China
- Low debt level, but the macroeconomic stability is under pressure due to sanctions

- Harsh and numerous sanctions imposed on the country after it invaded Ukraine
- Dependence on hydrocarbon (39% of GDP) prices
- Declining demographics
- No trade agreements beyond the neighbourhood
- No access to ice-free seas except for the Black sea
- Dependence on foreign technology
- Weak infrastructure aggravated by the lack of investment

RWANDA 

COFACE ASSESSMENTS	COUNTRY RISK	B
	BUSINESS CLIMATE	A4

POPULATION Millions of persons	13.0
GDP PER CAPITA US Dollars	854

2023 OUTLOOK

- The growth outlook remains strong thanks to momentum in industry and services, and the recovery of the tourism industry.
- The current account deficit will widen due to still high prices of food and energy, as well as increased imports of intermediate and capital goods.
- The fiscal deficit should improve slightly as fiscal consolidation measures (optimising non-wage spending, tax reforms) continue to be implemented. Increasing public debt is a concern.
- The legislative elections, scheduled for September 2023, will confirm the RPF and Kagame's hold on the domestic political environment.

- Geological potential: cassiterite, coltan, gold, precious stones
- High value-added tourism potential
- Developing industrial and financial base
- One of the most favourable business environments on the African continent
- Significant progress in governance and relative political stability

- Agriculture exposed to climate risks
- Highly dependent on commodity prices and international aid
- Large twin deficits and high public debt
- Landlocked and exposed to geopolitical tensions in the Great Lakes region. Tensions with the DRC have escalated, but direct military confrontation between the two countries remains unlikely
- High demographic pressure, population density among the highest in Africa

SAUDI ARABIA

COFACE ASSESSMENTS	COUNTRY RISK	B
	BUSINESS CLIMATE	B

POPULATION Millions of persons	35.5
GDP PER CAPITA US Dollars	23,507

2023 OUTLOOK

- After strong growth in 2022, activity will moderate in 2023 because of lower oil prices, tighter monetary policy and base effect impact.
- Inflation should ease in 2023 as the central bank will follow the Fed's policy tightening due to the currency peg.
- Lower energy prices, the OPEC decision to cut oil production, and lower Asian demand, will drag down the current account surplus; and weigh on the fiscal surplus, which should encourage the government into fiscal consolidation in 2023.
- The relations with the US will remain resilient despite some occasional disagreements, but the Kingdom should remain skeptic towards the Iran nuclear deal.

- Offshore hydrocarbon deposits to come online in 2023
- CFA franc pegged to the euro
- IMF-supported pro-business reforms and infrastructure investments (Emerging Senegal Plan)
- Strong track record of political stability

- Vulnerable to climatic hazards and fluctuations in commodity prices (groundnuts, cotton, fish, gold, etc.)
- Food importer (~30% net self-sufficiency), despite agriculture providing 17% of GDP and employing 80% of the population
- Ineffective state intervention, leading to bureaucracy and high debt
- Large current account deficit

SERBIA

2023 OUTLOOK

- The Serbian economy is set to continue to slow down in 2023 due to still high inflation, lower demand from its main European trading partners, and increased borrowing costs, which will weigh on consumption, exports and private investment.
- A two-year EUR 2.4 billion stand-by arrangement with the IMF was signed late 2022 and requires a fiscal consolidation to be achieved, which will be challenging amid an economic slowdown.
- The ruling conservative-nationalist SNS party and the country President Vučić won the snap elections in April 2022.

2023 OUTLOOK

- Despite inflationary headwinds, the economy is expected to grow in 2023 thanks to strong external demand for commodities and the influx of investment in the mining and agricultural sectors whose increased activity, together with expatriate remittances, will support robust private consumption.
- The country can count on foreign aid and the IMF support to finance its reforms in order to improve its budgetary. FDI will remain the main source of financing for the large external deficit.
- The 2023 general elections are coming in a fragile political and social climate due to strong rivalry between the two main parties and corruption.

2023 OUTLOOK

- Outlook for trade has weakened amid deteriorating global demand conditions. This will constrain growth in Singapore's export-oriented sectors, including electronics and chemicals.
- Continued recovery in tourism-related activities, such as air travel, accommodation, entertainment and recreation, will provide support to the economy.
- Labour market prospects will weaken amid expected economic slowdown, leading to a rising unemployment rate.
- Inflation is expected to remain elevated and above trend as import prices stay high. MAS will likely tighten monetary policy further in 2023.

2023 OUTLOOK

- Slovakia is set for only modest economic growth in 2023, as high inflation is eroding purchasing power and will weigh on consumption. Exports should slow down, with lower demand from Western Europe and higher interest rates will weigh on investments.
- Inflation will increase further in 2023 as regulated energy prices for households will rise sharply in January.
- Public spending will increase noticeably.
- After the liberal SAS left the right wing coalition and a successful vote of no confidence against the government, it remains open if Slovakia will hold a snap-election.

2023 OUTLOOK

- Slovenia's economy is set for only modest growth in 2023, due to the lack of demand from Western Europe and higher interest rates.
- Inflation should remain high and keep weighing on the consumption and investment behaviour.
- Public deficit will increase due to state support measures for households.
- After the general election in 2022, Slovenia exchanged its right-wing populist government for a social-liberal one. Political newcomers newly founded the major coalition party. Therefore, its durability is questionable.

2023 OUTLOOK

- While agriculture and financial services should remain resilient, industries will continue to suffer from load-shedding. Domestic demand should be constrained by inflation and monetary tightening. Measures to solve the power crisis have been taken, but their short-term impact is limited.
- The combination of higher expenditure and lower revenue collection could hamper the authorities' strategy to rebuild much-needed fiscal space.
- After surviving a misconduct scandal, Cyril Ramaphosa secured the leadership of the ANC ahead of the 2024 elections. However, with its popularity declining, the ANC could fail to win an absolute majority for the first time since 1994.

2023 OUTLOOK

- The sharp slowdown in household consumption, in a context of inflation higher than wage increases, will hamper the rebound in GDP, which will remain below its end-2019 level.
- Being isolated from the rest of the continent (weak gas interconnection with France), the country will have to reduce its gas consumption less and prices are relatively lower (MIBGAS market).
- According to polls conducted at the end of 2022, the main opposition party (PP, right-wing) would come out on top in the general elections at the end of 2023. Although it would narrowly win an absolute majority in the event of a hypothetical alliance with Vox (far right), the outcome of the election is highly uncertain.

2023 OUTLOOK

- In June 2022, in the absence of a return to civilian rule, the Paris Club suspended debt reduction and restructuring.
- Debt monetisation has fuelled hyperinflation. Port blockades and civil servants' strikes are paralysing the country.
- In a political stalemate, the military cracks down on civilian protests, relying on the exhaustion of the movement. However, a preliminary agreement with civilians was signed in December 2022.
- Confirmed in November 2022, the presence of the paramilitary group Wagner in the gold mining operation confirms Moscow's support in terms of equipment and military training.

- Agriculture and livestock breeding improve their productivity thanks to Gulf investors
- Renegotiation with South Sudan of fees paid for its oil through Sudanese pipelines, as well as with Israel

- Political instability, weak legitimacy of the military authorities following the coup in 2021 in the face of the opposition and the Islamists, gold smuggling, corruption, military-economic entanglements
- Clashes between ethnic and tribal militias in the west and south
- Poverty, high unemployment, food insecurity
- Unsustainable external debt, aggravated by suspension of international aid and low foreign exchange reserves
- Hyperinflation

SURINAME

COFACE ASSESSMENTS	COUNTRY RISK	D

POPULATION Millions of persons	0.6
GDP PER CAPITA US Dollars	4,681

2023 OUTLOOK

- Despite strong gold exports and rising private investment, boosted by new hydrocarbon discoveries, the recovery will remain sluggish, with very high inflation weighing on the import bill and consumption.
- The accounts will be consolidated by mining revenues and international aid, as the country has been granted IMF financing and debt rescheduling in exchange for the implementation of consolidation measures and structural reforms.
- The country would like to obtain more flexibility from its partners in their implementation, arguing that the price is too expensive for the population and that oil revenues are still to come.

2023 OUTLOOK

- The Swedish economy is set for a slowdown in 2023 due to high inflation, and rising interest rates, leading to moderating domestic and external demand.
- The rising interest rates weigh on the construction sector as financing conditions become tighter and input costs remain high.
- A conservative coalition made of three parties and led by the centre-right Moderates Party leader Ulf Kristersson will lead the government. Given its minority situation, it will need the backing of far-right Sweden Democrats.

2023 OUTLOOK

- Slowdown of activity due to an adverse regional context (stagnation in the Eurozone).
- The country is vulnerable since, before the war, it imported 40% of its gas from Russia and has no storage capacity.
- Inflation is expected to remain more moderate than in the rest of the region, thanks in particular to a strong Swiss franc.
- According to polls conducted at the end of 2022, the political landscape would remain relatively unchanged after the October 2023 federal elections: the nationalist conservatives (SVP, 26%) would win by a wide margin ahead of the Socialist Party (16%) and the Liberal Democrats (LDP, 16%).

2023 OUTLOOK

- Taiwan's electronics and components export sector to struggle in 2023 amid global electronics correction and general slowdown in goods trade.
- Domestic activity and tourism to show stronger recovery and provide support to overall economic activity.
- Consumer inflation to ease, though core CPI may prove stickier. Central bank should continue rate hikes in H1 23.
- US-China strategic competition, and cross-straits relations remain key risk, but Taiwan's tech dominance should be sustained in medium-term.

2023 OUTLOOK

- Growth is expected to slow, driven by a slowdown in household consumption and a deterioration in net exports.
- Inflation will remain high, which will hamper household consumption. It will also be affected by lower transfers from Russia (58% of total transfers representing a third of GDP in 2021).
- The current account deficit will deteriorate in 2023, due to a higher trade balance deficit (metals exports would not compensate energy imports) and lower transfers.
- The deficit will be higher in 2023, due to the slowdown in economic activity (lower tax revenues).

2023 OUTLOOK

- Despite the rise in commodity prices weighing on imports and household purchasing power, growth will continue to be supported by public and private investment in infrastructure projects.
- The twin deficits will remain large, notably because of the deterioration in the terms of trade, the repatriation of corporate profits, and social and development spending (health, support for household purchasing power, etc.), but the public debt will remain sustainable (42.1% of GDP).
- President Samia Suluhu Hassan will continue her efforts to calm the social climate and strengthen external relations.

2023 OUTLOOK

- The economy will be supported by the recovery of tourism and domestic demand thanks to public spending, slowing inflation, and an improved labour market.
- However, private consumption will be constrained by high household debt in the context of monetary tightening.
- The current account is expected to return to surplus thanks to tourism, limiting the risk of further deterioration of foreign exchange reserves due to capital outflows.
- Uncertainties loom ahead of the 2023 general election, although the choice of the future Prime Minister will continue to be largely influenced by the military holding the upper house of parliament.

- Regional hub, long coastlines, proximity to fast-growing Asian markets
- Richly endowed in agricultural resources (natural rubber, rice and sugar cane)
- Diversified exports: tourism, machines, car parts, electronic components, agri-food products, fish and shellfish
- Well-capitalised commercial banks with high level of loan loss provision

- Inadequate infrastructure
- Ageing population and shortage of skilled labour
- High household debt levels
- Uncertain political situation; antagonism between rural and urban areas
- High corruption perception and large informal economy

2023 OUTLOOK

- The recovery will continue, driven by large government spending and a rebound in private consumption.
- Lower oil and gas revenue will contribute to the drastic widening of the current account deficit, which is – like the public deficit – mostly covered by the sovereign petroleum fund.
- Public debt is low, but the very large deficit and the depletion of active hydrocarbon fields raise questions about the latter's sustainability, given the dependence on the sector for its financing.
- After ASEAN formally accepted its membership in 2022, steps for its finalisation will be discussed in 2023, the same year as the scheduled parliamentary elections.

- Oil and gas reserves in the Timor Sea (Greater Sunrise)
- Sovereign wealth fund (1100% of GDP)
- Total dollarisation limiting the inflationary risk
- Attractive tourist destination
- 43rd out of 167 in the EU Democracy Index 2021 (5th Asian country/7th with Australia and New Zealand)

- Very high dependence on oil revenues while active oil fields are running dry
- Vulnerability to natural disasters, underdeveloped infrastructure
- High reliance on food imports (low agricultural development)
- Deficit in human capital
- Around 40% of the population lives below the poverty line
- High unemployment rate among young people (33% in 2016 vs. 5% for the population above 25)
- Weak banking intermediation

TOGO

COFACE ASSESSMENTS	COUNTRY RISK	C
	BUSINESS CLIMATE	B
POPULATION Millions of persons		8.5
GDP PER CAPITA US Dollars		993

2023 OUTLOOK

- A favourable growth outlook for 2023, driven by the agricultural sector (especially cotton), which will promote consumption, infrastructure financed by foreign partners, port and airport activity.
- Growth will be highly sensitive to inflationary shocks, notably due to a risk of food shortages and uncertainty over the price of agricultural inputs.
- Deficits will remain high due to subsidies and imported inflation and will be financed mainly by regional borrowing and project loans.
- A static and framed political landscape, coupled with a terrorist threat in the north.

2023 OUTLOOK

- The hydrocarbon and fertiliser sectors will drive growth, benefitting from increased production and high prices. Private investment in energy and the privatisation of the capital's port will boost activity.
- Continued fuel subsidies would further widen the government deficit, but energy revenues should limit it. With the return of growth, the debt ratio should fall.
- Imports are expected to reduce the current account surplus, which will nevertheless remain large thanks to oil and gas revenues.
- Some of the Keith Rowley government's reforms requiring more than a simple majority could be hampered.

2023 OUTLOOK

- With full powers since 2021, President Saïed is organising the transition from a semi-parliamentary regime to a strong presidential one, approved by a constitutional referendum in July 2022.
- Faced with a risk of default, Tunisia secured an IMF loan for USD 1.9 billion over 4 years. The reduction of subsidies and the public wage bill, as well as the reform of state-owned enterprises, will be difficult given the tense social context.
- Inflation, fuelled by shortages and depreciation, will weigh on consumption and social discontent.
- The economic slowdown in Europe and domestic unrest will weigh on exports and tourism.

- Ongoing diversification of the economy
- Proximity to the European market
- Support from external donors
- Potential in tourism
- Natural resources (phosphates and hydrocarbons)

- Society under stress: youth unemployment (~40%), regional gap between seafront and interior, brain drain and illegal emigration, fragile social peace
- Since the 2011 revolution, uncertainty, political and institutional fragility
- Informal economy that is prevalent and harmful to public finances
- Excessive weight of salaries and subsidies in public spending; inefficient and highly indebted public sector
- Tourism sector permanently weakened by successive shocks
- Decline in competitive advantages (textiles, tourism)
- Energy dependence

2023 OUTLOOK

- In 2023, the Turkish economy will slow on high inflation, lower net exports contribution and base effects.
- Fiscal discipline is expected to continue despite the elections to be held in June 2023. However, the share of foreign exchange denominated debt in total debt stock of the central government leaves the fiscal dynamics exposed to currency moves.
- The current account deficit will shrink in line with higher tourism revenues and decline in commodity prices.
- As elections get closer, risk of polarisation within the society may increase. However, this should not threaten the political stability of the country.

2023 OUTLOOK

- GDP growth will accelerate in 2023, driven by investment in hydrocarbons and net exports.
- The current account balance will remain in surplus, due to hydrocarbon exports (mainly to China), and the import substitution policy pursued by the government.
- Inflation will continue to moderate, but will remain high, which may hurt household consumption. At the same time, the government's emigration curb policy may have a positive but moderate impact on private consumption.
- The fiscal balance will remain positive, thanks to energy revenues.

- Fourth-largest natural gas reserves in the world (nearly 10% of the total)
- Strategic position in Central Asia and between China on the one hand, and Russia and Europe, via the Caspian Sea, on the other
- Healthy public accounts and a moderate level of debt
- Observer status at the World Trade Organization (WTO)

- High dependence on hydrocarbons (87% of exports, of which 77% gas) and on China, which receives nearly 75% of gas exports
- Small private sector, anticompetitive market structures, no access to external financing
- Poor infrastructure
- Weak governance (corruption, authoritarianism, repression, politicised judiciary, opaque statistical system)
- Porous border with Afghanistan and weak military resources

2023 OUTLOOK

- Stronger growth due to the resumption of gold exports, with other sectors (oil, manufacturing, ICT, tourism) continuing to grow.
- Higher interest rates to counter inflation will weigh on domestic investment, but consumption will be supported by agricultural incomes.
- Fiscal consolidation as part of the programme agreed with the IMF.
- Concessional foreign loans will be preferred to expensive domestic loans.
- Oil equipment imports offset the return of gold exports.
- A tight democratic and social life and a terrorist threat on the border with the Democratic Republic of Congo.

2023 OUTLOOK

- With substantial human losses and economic damages due to the ongoing Russian invasion, the population share with income below the national poverty line could reach 60% in 2022, from 18% in 2021.
- The economy has started to adjust to war conditions, with perspectives of modest recovery and continued reconstruction. Exports of agricultural commodities increased since the Black Sea grain export agreement.
- The dependence on external financial assistance remains high with further possible grants from the US, EU and IMF.
- The transfers from the EU budget due to the disputed rule-of-law issues are still uncertain.

2023 OUTLOOK

- Growth will moderate due to lower energy prices and tighter monetary policy.
- Although ADNOC's target to spend USD 130 billion over 2022-2026 will support investment, the extension of OPEC+ oil cap will weigh on hydrocarbon production.
- Despite rising tourism revenues, the current account surplus will diminish due to lower oil exports, as will the fiscal surplus, but non-oil revenues will keep rising.
- Improving ties with Iran, Turkey and Israel create new trade and investment opportunities. Competition with Saudi Arabia will remain strictly economic.

2023 OUTLOOK

- Households will see their disposable income fall, due to support measures restricted to the most vulnerable. The consequent fall in consumption will lead to a recession in activity.
- In an environment of high costs (inputs, wages, interest rates) and contracting demand, business insolvencies will continue to rise.
- The election of Rishi Sunak, a supporter of a prudent fiscal policy, by the conservative parliamentarians in October 2022 brought calm to the financial markets. However, in this difficult economic and social context, further episodes of political instability cannot be ruled out.

2023 OUTLOOK

- Interest rates, which would remain at restrictive levels, and inflation, which would be falling but remain high, would weigh on household and business spending. As activity slows, bankruptcies would increase.
- Spending on infrastructure, green transition and semiconductor production programs will get underway, keeping the government deficit high. With Republicans regaining control of the House of Representatives, President Joe Biden's (Democrat) ability to act will be limited in the run-up to the 2024 election.
- The current account deficit would shrink as imports moderate and export competitiveness suffers from a strong USD.

2023 OUTLOOK

- The country's growth will experience a slowdown, due to weaker external demand.
- The deterioration of the economic situation in Russia could have a negative impact on the transfers received by Uzbek households and therefore on their consumption, as could the continuation of inflation.
- The current account balance will deteriorate despite dynamic exports, due to the import of capital goods with the continuation of the country's modernisation policy, and, possibly, a decline in transfers received.
- As government-led measures to protect households from inflation should be progressively phased out, the budget balance should improve in 2023.

2023 OUTLOOK

- Activity in 2023 should benefit from the recent US decision to marginally ease sanctions. However, the impact will be dampened by the obsolete oil infrastructure and by the US prohibition of payments of royalties or taxes to the regime, or any dividends to PDVSA.
- In addition to the challenging global oil market, the easing of sanctions also aims to encourage political talks between Nicolas Maduro and the opposition to reach an agreement that allows the holding of free presidential elections.
- Diplomatic relations with Brazil and Colombia should improve, in the midst of the recent inauguration of leftist governments in the two countries.

- GDP still well below the 2013 level
- Economy heavily dependent on hydrocarbons, loans from China and Russia, and energy cooperation with Iran
- Under US sanctions, despite a six-month license given in November 2022 to Chevron to export oil to the US to use as debt payment
- In default on its sovereign and quasi-sovereign (PDVSA) debt, payment delays in everyday business
- Shortage of foreign currency and basic goods
- Non-transparent and discretionary management of oil revenues burdened by rebates related to sanctions
- Hyperinflation, poverty and inequality
- Crime (homicides), corruption, patronage, trafficking of all kinds, black market

2023 OUTLOOK

- Although economic activity is expected to expand at a sustained pace, growth will decelerate in 2023 amid a weakened global economy.
- The fiscal policy should remain supportive in 2023, leading to a still relatively high fiscal deficit.
- Vietnam has low foreign exchange reserves due to SBV's interventions on the foreign exchange market in the first half of 2022 and the current account deficit. The latter is expected to narrow but will likely remain in 2023.
- Vietnam has taken a neutral stance on Russia's invasion of Ukraine. Conserving good relations with Russia is crucial amid fragile relations with China.

- Dynamic economy featuring one of the fastest growth rates in the region
- Beneficiary of the US-China trade war and the "China Plus One" strategy
- Large labour pool and low labour costs
- Development strategy based upon production upscaling and diversification into electronics

- Shortcomings in the business climate (data transparency and corruption perceptions)
- Dependent on China's supply chains, notably for electronics
- Incomplete reforms of the public sector, with a high level of indebtedness amongst SOEs
- Absence of large Vietnamese companies

2023 OUTLOOK

- High copper prices, the commissioning of a hydroelectric plant and the renewed market confidence since the election of Hakainde Hichilema in 2021 will continue to support the country's growth.
- The increase in social spending and the support of agriculture will strengthen household income and consumption, while the appreciation of the kwacha will moderate inflation.
- The fallout from the Ukrainian conflict could reduce export prospects, but the early lifting of the zero-COVID policy in China (essential partner) could offset this trend.
- Fiscal consolidation will depend on the reforms foreseen in the agreement reached with the IMF in August 2022, linked to the restructuring of the external debt.

- Mining wealth (copper, cobalt, nickel, uranium, gold, diamonds, manganese)
- Agricultural wealth (maize, tobacco)
- Major hydroelectric potential

- Dependence on copper, further accentuated by the dependence on China, the main importer of ore
- Landlocked and dependent on the transport routes of neighbouring countries
- Electricity production is based almost exclusively on hydropower; transport networks are unreliable
- High levels of inequality; healthcare, educational and administrative deficiencies
- Sovereign default in 2020 and unsustainable external debt

2023 OUTLOOK

- Inflation is expected to be fuelled by poor harvests resulting from a succession of climatic hazards, pricey fertilisers and food supplies.
- Despite attempts to curb inflation (rising rates, aligning exchange rates, issuing gold coins), it will remain high.
- Despite increased food insecurity, Zimbabwe is not accessing the IMF's dedicated credit window due to arrears on its external debt.
- No structural economic reform is expected before the general elections in the summer of 2023, which are expected to see a continuation of the ruling party and electoral irregularities.

- Plentiful mineral resources (platinum, gold, diamond, nickel)
- Agricultural assets (maize, tobacco, cotton)
- Tourism development potential

- Economy devastated by hyperinflation and depreciation of the local currency, caused by the monetisation of debt
- Rain-fed agriculture, exposed to climatic hazards
- Precarious food and health (AIDS) situations, dependence on humanitarian aid
- Payment arrears to international donors
- Liquidity and foreign currency shortages
- Reliance on volatile commodity prices
- Underinvestment in infrastructure (especially energy)

A

ACA: Affordable Care Act (also known as Obamacare)

ADB: Asian Development Bank

AFD: Agence française de développement (French Development Agency)

AfDB: African Development Bank

Afreximbank: African Import-Export Bank

AFTA: ASEAN Free Trade Area

AGOA: African Growth and Opportunity Act - allows sub-Saharan African Country that are part of the scheme to export duty-free on the American market.

AIIB: Asian Infrastructure Investment Bank - multilateral financial institution created in 2014 to address infrastructure needs in Asia, which has since expanded to include members on all continents.

AMISOM: African Union Mission in Somalia

AML/CFT: These are international standards recommended by the FATF for the fight against money laundering and terrorist financing. The Financial Action Task Force (FATF) is an inter-governmental policymaking body whose purpose is to establish international standards

APEC: Asia-Pacific Economic Cooperation

AQIM: Al-Qaeda in the Islamic Maghreb

ASEAN: Association of Southeast Asian Nations

AU: African Union

B

B2B: Business-to-Business

BCEAO: Banque Centrale des États de l'Afrique de l'Ouest (Central Bank of West African States)

BDI: Baltic Exchange Dry Index - Maritime transport price index that takes into account 3/4 of ore and 1/4 of loose agricultural products flow

BEAC: Banque des États de l'Afrique Centrale (Bank of Central African States)

C

CABEI: Central American Bank for Economic Integration (in Spanish, *Banco Centroamericano de Integración Económica*)

CAFTA-DR: Dominican Republic-Central America FTA

CAR: Central African Republic

CARICOM: Caribbean Community and Common Market - Organisation bringing together 15 Caribbean states or dependencies with the aim of economic integration

CARIFORUM: Caribbean Forum of African, Caribbean and Pacific states (ACP) linked to the European Union

CBO: Congressional Budget Office

CDF: Cancer Drug Fund

CEMAC: Central Africa Economic and Monetary Community

CETA: Comprehensive Economic and Trade Agreement (EU-Canada)

Chaebols: Large industrial conglomerates that are run and controlled by a South Korean owner (typically families)

CICE: Crédit d'impôt pour la compétitivité et l'emploi (Competitiveness and Employment Tax Credit)

CIS: Commonwealth of Independent States

CLS: Continuous Linked Settlement System

COFFI: Committee on Forests and the Forestry Industry

COLA: Cost of Living Allowance

COVAX: COVAX is the vaccine pillar of the Accelerating Access to Vaccines for COVID-19, or ACT Accelerator, a global collaboration to accelerate the production of and equal access to COVID-19 diagnostics, treatments and vaccines, including for the poorest countries. The COVAX facility was established in 2020 under the leadership of Gavi, the Vaccine Alliance, the World Health Organization (WHO), Unicef and others

CPEC: China-Pakistan Economic Corridor

CPTPP: Comprehensive and Progressive Agreement for Trans-Pacific Partnership involving 11 countries in the Pacific area

CSG: Contribution Sociale Généralisée (Generalised Social Contribution)

D

DSSI: G20 Debt Service Suspension Initiative

DRC: Democratic Republic of Congo

E

EAC: East African Community

EBRD: European Bank for Reconstruction and Development

ECB: European Central Bank

ECF: Extended Credit Facility - IMF programme that provides financial assistance to countries with protracted balance of payments problems. The IMF's main tool for providing support to low-income countries, created under the PRGT.

ECOWAS: Economic Community of West African States

EEU (or EAEU): Eurasian Economic Union

EFSD: Eurasian Fund for Stabilization and Development

EFTPOS: Electronic Funds Transfer at Point of Sale

EIA: US Energy Information Administration

EIB: European Investment Bank

EITO: European IT Observatory

EMU: Economic and Monetary Union

ERM II: European Exchange Rate Mechanism

EU: European Union

F

FAO: United Nations Food and Agriculture Organization

FARC: Fuerzas Armadas Revolucionarias de Colombia (Revolutionary Armed Forces of Colombia)

FDA: US Federal Drug Agency

FDI: Foreign Direct Investment

Fed: Federal Reserve of the United States

FIFA: Fédération Internationale de Football Association

FOMC: Federal Open Market Committee

FTA: Free Trade Agreement

FY: Financial Year

G

G20: A group of the heads of state or of government, finance ministers and central bank governors of 19 countries: Argentina, Australia, Brazil, Canada, China, France, Germany, India, Indonesia, Italy, Japan, South Korea, Mexico, Russia, Saudi Arabia, South Africa, Turkey, United Kingdom, United States of America and the European Union.

G5 Sahel: Institutional framework for development and security cooperation regrouping Burkina Faso, Mali, Mauritania, Niger and Chad.

GAFTA: Greater Arab Free Trade Area

GCC: Cooperation Council for the Arab States of the Gulf, known as the Gulf Cooperation Council

GDP: Gross Domestic Product

GNP: Gross National Product

GRAINE: Gabonaise des Réalisations Agricoles et des Initiatives des Nationaux Engagés (Gabonese Initiative for Achieving Agricultural Outcomes with Engaged Citizenry)

GST: Goods and Services Tax

H

HDI: Human Development Index created by the UN

HIPC: Heavily Indebted Poor Countries (Initiative)

HOPE (act): Hemispheric Opportunity Through Partnership Encouragement

I

IATA: International Air Transport Association

ICC: International Criminal Court

ICJ: International Court of Justice

ICSID: International Centre for Settlement of Investment Disputes

ICT: Information and Communication Technology

IMF: International Monetary Fund

IOC: International Olympic Committee

J

JICA: Japan International Cooperation Agency

L

LNG: Liquefied Natural Gas

London Club: Informal group of private bank creditors that deals with public sector debt

M

MDRI: Multilateral Debt Relief Initiative

MENA: Middle East and North Africa

MERCOSUR (or MERCOSUL): South American Common Market - includes Argentina, Brazil, Uruguay, Paraguay and Venezuela

MSR: Maritime Silk Road

N

NAFTA: North American Free Trade Area

NAHB HMI: National Association of Home Builders Housing Market Index

NATO: North Atlantic Treaty Organisation

NDP: Net Domestic Product measures the aggregate output of resident economic agents over the period (GDP), net of the consumption of fixed capital (CFC), which corresponds to the cost of wearing out capital over the same period

NGEU: NextGenerationEU, a temporary EU instrument to support recovery through the Recovery and Resilience Facility (see definition above)

O

ODA: Official Development Assistance

OECD: Organisation for Economic Cooperation & Development

OPEC: Organization of Petroleum Exporting Countries

OSCE: Organization for Security and Co-Operation in Europe

P

Pacific Alliance (Alianza del Pacífico): Trade agreement including Chile, Colombia, Peru and Mexico

Paris Club: Official creditor's informal grouping

PDVSA: Petróleos de Venezuela, S.A. (Petroleum of Venezuela) - Venezuelan state-owned oil and natural gas company

Petrocaribe: Energy cooperation agreement between Caribbean countries and Venezuela enabling the former to buy oil on preferential terms

PPP: Public-Private Partnership

PRGT: Poverty Reduction and Growth Trust - IMF's special low-interest lending programme for poor countries with structural balance of payments difficulties

PSUV: United Socialist Party of Venezuela

PVC: Polyvinyl Chloride

R

RCEP: Regional Comprehensive Economic Partnership involving 15 countries in the Asia-Pacific region

R&D: Research and Development

RRF: The EU Recovery and Resilience Facility is the budget associated with NextGenerationEU (NGEU) (see definition below)

S

SACU: South African Customs Union of five southern African countries (South Africa, Lesotho, Botswana, Namibia, Eswatini), created in 1969

SADC: Southern African Development Community

SAR: Special administrative region

SCFI: The Shanghai Shipping Freight Index reflects the export rate of the containers transportation. It includes freight rate (Shanghai) indices of 15 maritime roads and a composite index (Freight indices reflect the maritime freight and other maritime road tax)

SDR: Special Drawing Right

SEPA: Single Euro Payments Area

SMEs: Small- and Medium-sized Enterprises

SOCAR: State Oil Company of Azerbaijan Republic

SOE: State-Owned Enterprises

SOFAZ: State Oil Fund of Azerbaijan

SWF: Sovereign Wealth Fund

SWIFT: Society for Worldwide Interbank Financial Communication - an organisation with a system for the electronic transfers of funds between member banks in Europe and North America

T

TANAP: Trans-Anatolian Natural Gas Pipeline

TAP: Trans Adriatic Pipeline

TPP: Trans-Pacific Partnership

TTIP: Transatlantic Trade and Investment Partnership

GLOSSARY

U

UK: United Kingdom of Great Britain and Northern Ireland

UN: United Nations

UNASUR: Union of South American Nations

UNECE: United Nations Economic Commission for Europe
